TERMS OF REFERENCE

Implementation, Configuration, Integration, Deployment and Support of the MaJo e-School Bridge Platform

Revised Scope: 49 Included Modules

Prepared for
Lebawi International Academy (LIA)
Addis Ababa, Ethiopia

Prepared for implementation by
MaJo Bridge Technologies and Events

Document status: Revised TOR for the awarded supplier
Version: 1.0 | Date: October 2026

CONFIDENTIAL - For LIA and MaJo Bridge project use

Document Control

Document title	Revised Terms of Reference - MaJo e-School Bridge (49 Modules)
Client	Lebawi International Academy (LIA)
Supplier	MaJo Bridge Technologies and Events
Version / date	Version 1.0 / October 2026
Supersedes	LIA — Terms of Reference, Version 3 (academic-focused TOR), to the extent of any conflict in scope
Primary references	LIA Software Requirements Specification (February 2025); LIA TOR V3; MaJo Bridge Technical Proposal (Final); MaJo e-School Bridge Business Proposal; MaJo 59-Module Catalogue; subsequent written scope and commercial clarifications
Approval status	For joint review, confirmation and signature by authorized representatives of LIA and MaJo Bridge

Important scope interpretation

This TOR defines the agreed functional scope as 49 included modules from the supplier's 59-module catalogue. The ten exclusions listed in Section 4 are outside the contracted scope and must not be enabled, configured, charged for, or treated as acceptance dependencies unless LIA later authorizes a written change.

The supplier's proposals describe product capabilities and an existing live platform. This TOR converts the selected scope into contractual implementation, configuration, security, testing, documentation, training, handover and acceptance obligations. Where a proposal describes a feature as already implemented, MaJo Bridge must still demonstrate that the feature works for LIA's approved configuration and permissions.

The supplier's Hybrid Hosting Addendum refers to "55+ desks" in the broader product. That phrase does not expand LIA's contracted scope: the authoritative scope remains the 49 included modules in Appendix A, with the ten exclusions in Section 4.2. Any additional desk, module, portal or transport-related capability requires written change control.

Contents

1. Introduction and Background
2. Purpose and Objectives
3. Guiding Principles and Interpretation
4. Scope of Work and Exclusions
5. Functional Requirements: 49 Included Modules
6. Cross-Cutting Functional Requirements
7. User Roles and Access Control
8. Data Migration and Data Ownership
9. Architecture, Hosting and Integration
10. Security, Privacy and Safeguarding
11. Non-Functional Requirements
12. Implementation Methodology and Governance
13. Deliverables
    - Approved hybrid architecture diagram and data-flow diagram showing the LIA server, MaJo Bridge cloud, interfaces, network paths and external services.
    - LIA-approved data-placement matrix identifying master copies, permitted cloud copies, backups, retention and access for each data category.
    - Server and cloud deployment/hardening checklist, infrastructure prerequisites, firewall/port requirements, certificate and secret-management approach, and responsibility matrix.
    - Role-based remote-support procedure, supplier/subprocessor list, audit/logging plan and incident escalation procedure.
    - Backup, retention and disaster-recovery plan, including agreed backup frequency, protected copy locations, restore instructions, recovery targets and restore-test evidence.
    - Hybrid workflow test evidence covering sensitive-record isolation, approved publication, role/tenant separation, connectivity interruption and restoration.
14. Testing and User Acceptance
15. Training, Documentation and Change Management
16. Support, Maintenance and Service Management
17. Acceptance Criteria and Completion
18. Responsibilities
    - MaJo Bridge will provide the agreed application/server installation, hybrid configuration, secure connection, role configuration, technical documentation, training for the nominated LIA lead, and evidence of testing and restore procedures. The supplier shall not assume that LIA accepts unspecified equipment, infrastructure, staffing, hosting or recurring-cost obligations merely because they are mentioned in Addendum A.
    - Subject to the jointly approved responsibility matrix, LIA will nominate an IT/administration lead and functional approvers; provide timely decisions and approved data mappings; arrange access to the agreed server location, power and campus network; and authorize any parent/guardian notices or consent process required for the system. LIA is not required to procure hardware, power equipment or third-party services until specifications, ownership and costs are approved in writing.
19. Assumptions, Dependencies and Constraints
20. Change Control
21. Commercial and Contractual Clarifications
22. Risk Management
23. Sign-off

Appendix A: Module Register
Appendix B: Minimum UAT Checklist

1. Introduction and Background

Lebawi International Academy (LIA) operates academic, student-service, communication, library, quality-assurance and administrative workflows across departments. LIA's Software Requirements Specification (SRS) identifies the need for a unified digital environment that improves operational efficiency, data consistency, reporting, communication, accountability and access to reliable information.

Following supplier evaluation, MaJo Bridge Technologies and Events was selected for the MaJo e-School Bridge platform. The supplier's catalogue identifies 59 named modules. After scope discussions, LIA requested exclusion of ten modules. The resulting implementation scope under this TOR is the remaining 49 modules, together with the platform's relevant login portals, shared services, configuration, integrations, migration, training, support and handover.

This TOR must be read together with the final signed agreement and any mutually signed addenda. In case of inconsistency, the signed agreement and approved written change orders govern commercial terms; this TOR governs the functional and technical acceptance scope unless expressly amended.

2. Purpose and Objectives

The purpose of this TOR is to define what MaJo Bridge must configure, validate, deliver and support for LIA, and how LIA will verify that the delivered platform meets the Academy's requirements.

- Implement the 49 selected modules as a coherent, usable platform for LIA's approved school structure and workflows.
- Support academic operations from admissions and student registration through attendance, teaching, assessment, grading, reporting, transfer, promotion and alumni records.
- Enable staff, teachers, students and parents to use role-appropriate web and mobile access.
- Improve communication, collaboration, announcements, messaging, events and calendar coordination.
- Provide appropriate workflows for student affairs, counseling/support, safeguarding, quality assurance and leadership activities.
- Preserve the confidentiality, integrity, availability and traceability of LIA's information, particularly student, health, counseling and safeguarding records.
- Establish measurable implementation, testing, training, documentation, handover and support obligations.
- Make excluded modules and any recurring costs explicit so that no scope or payment obligation is implied.

3. Guiding Principles and Interpretation

- School-centered configuration: workflows, terms, grade structures, role names, approval paths and reports must be validated with LIA before production use.
- Single source of truth: student and academic records should be entered once and reused by connected modules where supported.
- Least privilege: each user sees and changes only the information required for their assigned role.
- Demonstrable delivery: features are accepted only after demonstration and successful testing against agreed scenarios.
- Privacy by design: sensitive student records and safeguarding information require restricted access and appropriate handling.
- No silent scope expansion: excluded modules, paid add-ons, third-party services and recurring charges require written approval.
- Clear distinction between standard product capability, LIA-specific configuration, custom development and future enhancements.

4. Scope of Work and Exclusions

4.1 Included scope

The supplier shall provide implementation services for the 49 included modules listed in Appendix A. The scope includes requirements confirmation, configuration and agreed customization, role and permission setup, school branding and settings, agreed data import, integration configuration, testing, defect correction, go-live preparation,

training, documentation, production deployment and post-go-live support as defined in this TOR and the signed agreement.

4.2 Explicit exclusions

Excluded module	Catalogue reference	Scope treatment
Campus Management	Catalogue module 3	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
CCTV	Catalogue module 4	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Finance	Catalogue module 33	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Human Resource	Catalogue module 35	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Payroll	Catalogue module 36	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Transport	Catalogue module 39	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Buses	Catalogue module 40	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Live GPS	Catalogue module 41	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Register Driver	Catalogue module 42	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.
Digital Operations	Catalogue module 56	Excluded from configuration, implementation, testing and acceptance under this TOR unless added by signed change order.

The Inventory, Procurement & Store module (catalogue module 34) remains included because it is not among the ten exclusions confirmed by LIA for this revised scope. It must not be confused with the excluded Finance module.

The supplier shall ensure that excluded modules do not create a dependency that prevents included modules from operating. Where an included module displays references to excluded functionality (for example, fees, transport, GPS, CCTV or payroll), the supplier must disable or hide the relevant feature for LIA, or clearly label it as unavailable, without exposing inaccessible workflows or misleading users.

4.3 Login portals and shared platform services

The supplier's catalogue describes five login doors: Administration/ERP, Teacher, Parent, Student and Driver. The first four are relevant to this scope. The Driver portal is associated with excluded transport/driver functionality and shall remain disabled or inaccessible unless LIA approves otherwise in writing. Role Permissions, Audit Log, System Health, Go-live & Compliance, Settings and Dashboard/Profile are included modules and shared services as listed in Appendix A.

The supplier's financial proposal states that five login portals are included with qualifying module orders. The commercial treatment of the Driver portal when its associated modules are excluded must be confirmed in the signed agreement; this TOR does not authorize charges for an excluded module or portal.

5. Functional Requirements: 49 Included Modules

The requirements below establish the minimum LIA-specific expected outcomes. They are not permission to charge separately for a feature that is already included in a selected module. Supplier demonstrations must use LIA-configured sample data and approved roles, with sensitive real data used only after authorization.

A. Organization and School Configuration

1. Institution Management — Maintain the Academy's institutional identity and owner-level organization profile. Configure the approved institution name, identifiers and core organizational information. Multi-campus management functionality is excluded; this module must not require the excluded Campus Management module.

2. School Management — Maintain LIA's school profile, branding and day-to-day school settings. Configure school year/term structure, school identity and agreed preferences. Changes to critical settings must be limited to authorized administrators and logged where audit capability exists.

B. Academic Management and Teaching

5. Academic Management — Configure LIA's academic structure, levels, classes, sections, subjects, terms and academic meetings. Use LIA-approved level names and structures, including Pearson Early Years, Primary, Middle and Secondary where required by LIA. Provide controlled setup and year-to-year rollover.

6. Examinations & Grade Approvals — Support the configured process for examination result review and approval before publication. Define who enters, reviews, approves, returns for correction and publishes marks. Preserve the status and responsible user for each step.

7. Weighted Markbook — Configure assessment categories, weighting rules, grading scales and calculation rules approved by LIA. Support entry and validation of marks, automatic calculation, controlled correction, class/subject views and export. Validate calculations against LIA-approved examples before production.

8. Report Cards — Generate term or period report cards from approved marks and configured student/class data. Support review and publication controls, consistent templates and export/print where available. Published reports must reflect approved results only.

9. Exam bank & papers — Provide a repository and workflow for creating, storing, organizing and reusing exam questions or papers, subject to product capabilities. Support exam attempts and score transfer to the markbook where supported. Restrict access to confidential examination material.

10. Attendance — Support daily student attendance entry by authorized teachers or staff, correction workflows, attendance summaries and relevant exports. Configure statuses and reporting rules with LIA. Feed attendance data to relevant analytics and at-risk insights where supported.

11. Homework — Allow teachers to assign homework, set due dates, attach learning materials, track submission status and provide feedback where supported. Students must see only work assigned to their classes or accounts.

12. At-risk & insights — Use configured indicators such as low marks and frequent absence to flag students requiring follow-up. Make the indicators and limitations understandable to authorized staff. Treat automated flags as prompts for professional review, not as definitive diagnoses or decisions.

13. Analytics & exports — Provide academic analysis such as grade lists, category averages, class/subject summaries, teacher insights and downloadable reports. Validate report definitions, filters and data accuracy with LIA.

14. Classroom Teachers — Maintain the assignment of teachers to classes and subjects for academic operations. Ensure these assignments control relevant class access and appear consistently in timetables, attendance, homework and grading.

15. Add Teacher — Create teacher user accounts and associate them with approved roles, classes and subjects. This is a teacher-account function only; full Human Resource management is excluded. Account creation must follow LIA authorization.

16. Timetable — Maintain and publish the weekly timetable for staff and students. Configure academic periods, classes, subjects and teacher assignments. Identify conflicting allocations where supported and provide controlled update/publish processes.

17. LMS — Configure the course/learning hub for approved classes, including lesson resources, homework, exams, discussions and class roster linkage where supported. Ensure access follows class membership and LIA's learning policies.

18. Lesson plans — Enable teachers to prepare and submit weekly lesson plans and related links/resources. Configure review and feedback by the appropriate academic lead or department head, with status tracking and resubmission.

19. Curriculum office — Support curriculum/department workflows, unit or curriculum planning, department-head review, academic teacher evaluation workflows and meeting records. Configure the approval path and fields with LIA.

20. Grade Workflow — Configure the mark entry, review, approval, return-for-correction and publication stages. Apply role permissions and ensure that published marks cannot be changed silently. Any correction after publication must follow an authorized process.

C. Student Information and Student Services

21. Students (SIS) — Maintain the core student register, including identity, class, house or grouping, parent/guardian links and approved student profile fields. Protect sensitive fields and keep the student record consistent across connected modules.

22. Add Student — Support creation of individual student records and bulk import from approved Excel/CSV templates. Validate required fields, identify duplicate or invalid records where supported, and provide an error/reconciliation report before final import.

23. Admissions — Support application stages, document collection, entrance-exam scores, waitlist status and enrollment into the student register. Configure decision statuses, authorized users and parent/applicant communications as agreed with LIA.

24. Alumni — Maintain appropriate records for former students and their historical association with LIA. Define which data remains available, to whom and for what purpose. Alumni records must not be exposed to ordinary active-student views.

25. Student Portal Settings — Configure which functions and information students can access through their own portal. Apply age- and role-appropriate access and ensure that students cannot access other students' records.

26. Student Password Resets — Provide a controlled workflow for student account recovery. Verify the authorized requester and log administrative resets where supported. Do not expose passwords in readable form.

27. Student Affairs & Discipline — Record authorized conduct, grievance, discipline and student-affairs matters with appropriate status and follow-up. Restrict sensitive records to designated staff and configure escalation/notification rules approved by LIA.

28. Student support — Support approved student-support workflows such as counseling, student documents, health-related records, individual education plans (IEPs) and college guidance, to the extent provided by the module. Restrict each record type by role and need-to-know access. The module is not a substitute for LIA's professional judgment.

29. Safeguarding — Provide restricted recording and tracking of child-protection/safeguarding cases and follow-up. Safeguarding notes must not be visible to parents, students or ordinary classroom teachers. Access must be limited to specifically authorized safeguarding personnel, with auditability and secure handling.

30. Student programs — Support school clubs, student programs, scholarship tracking, internship hours and leadership/student activity meetings where configured. Record participation and relevant feedback and provide authorized summaries.

31. Parents & Link Approvals — Allow controlled linking of a parent/guardian account to the correct student record. Parent access must not be activated until identity/relationship checks defined by LIA are completed. Support multiple approved guardians where configured and prevent unauthorized cross-family access.

32. Transfers & Promotion — Support student movement between classes or school levels and year promotion. Maintain history and apply LIA approval rules. Validate that promotion does not overwrite historical grades, attendance or report cards.

D. Store, Procurement and Inventory

34. Inventory, Procurement & Store — Support purchase requests, supplier records, receiving, issuing and stock reports within the product's available functionality. Configure categories, approval roles, transaction records and

reporting with LIA. Finance, payroll and HR functions remain excluded; this module must not enable excluded finance processing.

E. Staff Directory and Account Creation

37. Administration Staff Directory — Maintain a directory of non-teaching staff for operational identification and authorized communication. Limit fields to those approved by LIA; this is not a Human Resource or employee lifecycle system.

38. Add Administration Staff — Create non-teaching staff accounts and assign authorized platform roles. This function must not be used to manage recruitment, contracts, leave, payroll or other excluded HR processes.

F. Learning Resources

43. Library — Provide a library catalogue and circulation functions, including lending/return status and due dates where supported. Support searches and authorized management of library records. Any fines or payment processing that depends on Finance is excluded.

44. e-Books & Materials — Store and distribute approved learning files and educational materials with access controls by class or student. Provide clear organization, retrieval and authorized upload/update workflows. Respect copyright and LIA content permissions.

G. Communication and School Life

45. Announcements — Publish school notices to selected audiences such as staff, parents and students. Support authoring, approval where required, scheduling where available and an accessible announcement history.

46. Messages — Provide parent–teacher and class communication threads or discussion functions available in the platform. Apply role-based access, appropriate moderation and retention settings. Do not expose private conversations to unrelated users.

47. Events — Maintain school event records and publish approved event details to relevant audiences. Support dates, descriptions and associated materials where available.

48. Gallery — Store and display approved school photos and attachments. Limit access to intended audiences and ensure LIA authorizes any publication of identifiable student images.

49. Calendar — Provide a shared calendar for academic, staff, student-affairs and whole-school events. Configure who can create, edit, approve and view events.

H. Quality Assurance, Reporting and Platform Administration

50. QA Findings & Plans — Record observations, surveys, academic audits, action research and improvement plans. Support assigning actions, responsible owners, due dates and status tracking where available. Restrict confidential QA records to authorized users.

51. Reports & Analytics — Provide authorized reports across included student, attendance, academic, health and operational records. Exports may include Excel, CSV or PDF where supported. Finance-specific reports are excluded and must not be represented as part of the included scope.

52. Maya Assistant — Provide the in-app navigation/help assistant as described by the supplier. It must not become an unauthorized duplicate student database, disclose restricted records or provide unapproved access to sensitive information. LIA must be informed of data sent to any AI or external service.

53. Role Permissions — Provide granular role/permission configuration for included modules. Support the approved LIA role matrix and least-privilege access. The supplier shall test access with representative accounts and document the final permissions.

54. Audit Log — Record important user and administrative actions to the extent supported, including who performed the action and when. Make logs accessible only to authorized leadership, IT or QA personnel. Define retention and export arrangements with LIA.

55. System Health — Provide system/cloud/storage status indicators available to authorized IT or administration users. Explain the meaning and limitations of the displayed signals and establish an escalation process for service issues.

57. Go-live & compliance — Support the go-live checklist and available controls for MFA, privacy rights, school snapshots, Excel import and training. These functions do not replace a complete security review or LIA approval of the go-live.

58. Settings — Maintain authorized account and school preferences. Restrict sensitive settings to designated administrators and document any settings that materially affect data, access or workflow.

59. Dashboard / Profile — Provide a role-appropriate home/dashboard view and user profile information. Ensure dashboard numbers and links reflect the user's permissions and do not reveal unauthorized student or staff information.

6. Cross-Cutting Functional Requirements

- Data consistency: student, parent, class, subject and teacher records should be reused across included modules where supported, avoiding duplicate manual entry.
- Workflow configuration: LIA and MaJo Bridge shall document the approved statuses, roles, notifications and approval steps for admissions, marks, report publication, student support and safeguarding.
- Search and retrieval: users must be able to locate records needed for their role without being able to browse restricted information.
- Import and export: agreed data import templates and supported export formats shall be documented. Export permissions must be role-controlled.
- Notifications: where notifications are supported, configure recipients and triggers with LIA. SMS gateways or other chargeable third-party services are not included unless separately agreed in writing.
- Auditability: important changes to marks, student identity, parent links, access permissions and sensitive cases should be traceable to an authorized account wherever the platform supports audit logging.
- Accessibility and usability: forms, navigation and instructions should be clear for the relevant user groups and usable on supported desktop and mobile browsers.
- Localization: configure the language, date, academic year and grading conventions supported by the platform and approved by LIA. Any requirement not supported natively must be recorded as a gap rather than silently assumed.
- AI/assistant boundaries: any AI-enabled feature must have its data sources, processing, external transfers, limitations and user permissions explained to LIA before activation.

7. User Roles and Access Control

At inception, LIA and MaJo Bridge shall jointly approve a role-permission matrix for all included modules. Roles may include platform owner/administrator, leadership, IT administrator, academic directors, department heads/unit leaders, teachers, registrar/admissions staff, student affairs, counselors/support personnel, safeguarding personnel, QA staff, library staff, store/procurement users, students and parents/guardians. The final role list must reflect LIA's actual organizational structure.

- Apply least-privilege access and separate administrative configuration from ordinary user functions.
- Ensure parents can access only the student records linked and approved for them; students can access only their own records and authorized class materials.
- Separate safeguarding and counseling records from ordinary teacher, student and parent access.
- Restrict user creation, role assignment, permission changes and account disabling to authorized administrators.
- Require secure authentication and configure multi-factor authentication (MFA) for privileged accounts, and for other accounts where supported and approved.
- Provide a test record of access-control checks, including attempts to access records outside a user's role.
- Provide a documented process for staff departure, account suspension, password reset and recovery, recognizing that full HR lifecycle management is excluded.

8. Data Migration and Data Ownership

8.1 Ownership and control

All LIA school data, records, uploaded content, configuration information and LIA-specific outputs created or processed under this engagement remain under LIA's ownership and control, subject to applicable law and the

signed agreement. MaJo Bridge shall use LIA data only to provide the contracted services and shall not disclose it to another school or third party except as authorized by LIA or required by law.

8.2 Migration procedure

- Before migration, inventory the data sources, record types, formats, approximate volumes, owners and quality issues. Agree which datasets are in scope.
- Provide LIA with import templates, field definitions, validation rules and instructions before bulk import.
- Perform a test import using a representative sample and provide error logs for rejected, duplicated or incomplete records.
- Obtain LIA's approval of mapping and reconciliation results before production import.
- Record source counts, imported counts, rejected counts and exceptions. Preserve historical information to the extent agreed and technically supported.
- Do not delete or overwrite LIA's source data during migration. LIA will approve any final cutover or archival steps.
- Protect files during transfer and remove temporary copies after completion, subject to agreed retention and backup obligations.

8.3 Exit and portability

The supplier shall document how LIA can export its records and attachments in commonly usable formats supported by the system, and how access and data return will be handled on termination or transition. Any limits, fees or proprietary formats must be disclosed before contract signature. LIA must not be dependent on a supplier-only process to obtain its own data.

9. Architecture, Hosting and Integration

9.1 Architecture and hosting

The supplier's technical materials describe a web/mobile platform and a hybrid-hosting approach in which sensitive records may be held on an LIA-controlled on-premises server while other application services operate in the supplier cloud. The final deployment topology must be confirmed in writing before implementation. The supplier shall provide a clear architecture diagram identifying data flows, hosting locations, master-copy location for each data category, network requirements, external services, backup destinations and responsible operators.

- Student identity, marks, health, counseling, discipline and safeguarding data must be hosted and replicated only in locations approved in writing by LIA. If the proposed hybrid arrangement is used, the on-premises server is to be the authoritative source for sensitive records as agreed in the hosting addendum.
- Identify which features require internet access and what happens during loss of external connectivity. Do not promise offline functionality unless demonstrated and documented.
- Document server, storage, network, firewall, certificate, domain, application and mobile-app dependencies, including which party maintains each.
- Do not move the production system, data location or backup destination without prior written approval from LIA.

9.1.1 Hybrid hosting baseline and data placement

MaJo Bridge's Addendum A dated 15 September 2026 proposes a hybrid arrangement: the LIA-controlled on-premises server is the authoritative location for sensitive school records, while approved application delivery and limited services may operate in the MaJo Bridge cloud. This proposal shall be treated as the target design only after LIA and MaJo Bridge confirm it in writing. The signed hosting and data-placement schedule shall form part of the approved implementation baseline.

- Before configuration, the supplier shall provide a data-placement matrix listing each data category, its master-copy location, any permitted transient or published copy, backup location, retention period, responsible party and access method. LIA IT and the relevant functional owners must approve the matrix before production data is loaded.
- The supplier shall provide the on-premises installation, configuration and hardening steps for the LIA server, together with minimum hardware/software specifications, storage capacity, operating-system/database prerequisites, power and network requirements, patching responsibilities and a support procedure. LIA shall approve the specification and readiness checklist before procurement or installation; no unapproved hardware or recurring service cost may be committed in LIA's name.

- At kickoff, LIA and MaJo Bridge shall identify the LIA technical owner and functional approvers, confirm who provides the server hardware, locked/controlled room, reliable power/backup power and campus network, and agree who performs and verifies routine snapshots, monitoring, patching and recovery. These responsibilities must be recorded in a signed responsibility matrix; the proposal's reference to a Friday snapshot is not, by itself, an agreed backup frequency.
- The supplier shall document how LIA will handle parent/guardian consent where required, requests to access or correct records, retention and deletion requests, and secure deletion of temporary/exported copies, backups and cached published data. These workflows must be carried out by authorized LIA personnel and must not allow the supplier to independently disclose or erase LIA records.
- The supplier shall disclose the hosting country/region and provider for each cloud component, the categories of data processed by each third party, applicable subprocessors, and the retention/deletion arrangements for logs, sessions, telemetry and published copies. System-health monitoring shall use the minimum necessary technical telemetry and must not expose named student records or sensitive content to the supplier cloud/support console.
- Subject to LIA's written approval, the LIA-controlled server shall hold the authoritative copy of sensitive records, including student identity and family/guardian details; admissions and alumni records that identify students; marks, examinations and report-card records; student attendance; health, counseling, IEP/special-needs and safeguarding records; discipline/grievance records; and sensitive student documents. Internal staff information may be placed on the LIA server only to the extent it belongs to an included function and LIA classifies it as sensitive. This does not add the excluded HR or Payroll modules to scope.
- The MaJo Bridge cloud may host the application delivery layer, approved software/app updates, login routing, training materials, and limited system-health/support diagnostics that do not expose named student records. Announcements, gallery items and parent-facing views may be published or copied to the cloud only when LIA has expressly approved the content and publication workflow. The cloud must not become a second master database for sensitive records.
- Draft marks, unpublished report cards, safeguarding case files, counseling notes and raw student documents must not be stored in a cloud master copy or exposed through cloud administration/support tools. A parent-facing copy of an approved report or other record may be released only after the authorized LIA approval step; the supplier must document what is transferred, how long any copy or cache remains, and how it is protected and deleted.
- The two environments shall communicate through an encrypted connection using HTTPS/TLS or another LIA-approved secure mechanism. The supplier shall document network paths, ports, certificates, authentication, firewall requirements, service accounts, secrets/keys, remote-support access and monitoring. The cloud must not have unrestricted file-share or database access to the LIA server.
- The same School ID/student identifier and approved account-linking rules shall be used across included modules. The supplier shall demonstrate that the hybrid design does not create duplicate student identities, weaken role permissions, or permit one school/tenant to access another school's records.
- LIA shall retain control of the on-premises server and its administrative access. Supplier access must be individually assigned, authorized by LIA, limited to the task and duration required, logged, and revoked when no longer needed. The supplier shall identify all cloud providers, subprocessors and third-party services that may process LIA data.
- The supplier shall document the behavior of each critical workflow when the school loses internet connectivity, when the on-premises server is unavailable, or when the cloud link fails. Any claim that attendance or mark entry continues offline must be demonstrated during testing. The supplier shall not assume that off-campus parents can access school-hosted records during an external connectivity outage.
- Transport, Live GPS, Buses and Driver/transport functions are excluded from this TOR. References to live bus maps, driver sharing or transport passenger lists in Addendum A do not authorize implementation of those excluded functions. Any later request for them requires approved change control and separate commercial agreement.
- The supplier's Addendum A mentions a Friday snapshot and a second copy on another disk or school PC. These are proposals, not a substitute for the backup and recovery requirements in Section 10. The parties shall agree the backup frequency, retention, locations, encryption, responsible person, recovery-point objective and recovery-time objective in writing. At minimum, the design must include a protected backup copy under LIA's control and a demonstrated restore test before go-live.
- CCTV footage and recording remain on LIA's existing camera/NVR equipment. CCTV is excluded as a software module; no cloud CCTV archive or new CCTV functionality is authorized by this TOR.
- Before go-live, MaJo Bridge shall demonstrate the approved hybrid data flow using test records: create/edit a sensitive record on the LIA server; show that it is not available as a cloud master record; complete the LIA

approval/publish step; verify that only the permitted published view is accessible to the linked test parent; and verify that unauthorized roles and other tenants cannot access the record.

- Any cloud provider or subcontractor with access to LIA data must be disclosed and bound by confidentiality and security obligations.

9.2 Integration requirements

The supplier shall configure and test data exchanges between included modules where those integrations are available. At minimum, validate the following relationships:

- Students/SIS ↔ Admissions, parent links, transfers/promotion and alumni.
- Academic structure and teacher assignments ↔ timetable, attendance, LMS, lesson plans, homework, examinations, markbook and report cards.
- Examinations and Grade Workflow ↔ Weighted Markbook ↔ Report Cards, including approval before publication.
- Attendance ↔ Analytics & exports and At-risk & insights.
- Parent/student portals ↔ approved student records, marks, attendance, homework, materials, announcements and messages.
- Student support and Safeguarding ↔ only the specifically authorized staff roles and approved reports.
- QA Findings & Plans ↔ relevant academic and operational information available to QA under approved permissions.
- Inventory, Procurement & Store ↔ supplier/receiving/issuing records available within that module; do not imply integration with the excluded Finance module.
- Role Permissions and Audit Log ↔ user/account and administrative actions, to the extent supported.

For each integration, the supplier shall document the data exchanged, direction, trigger or schedule, failure behavior, reconciliation process and any limitations. Integrations with finance, payroll, HR, transport, live GPS, buses, CCTV or other excluded modules are outside this TOR.

10. Security, Privacy and Safeguarding

- Use HTTPS/TLS for web communication and encryption at rest where supported by the hosting and application design. Document any exceptions.
- Configure MFA for privileged accounts and other accounts as supported and agreed. Protect credentials using appropriate secure authentication practices; passwords must not be stored or displayed in readable form.
- Maintain role-based access controls and audit trails for important administrative and sensitive actions.
- Implement daily backups or snapshots as agreed in the final hosting plan, and document retention, storage location, access control and restoration procedure.
- Demonstrate a restore test before go-live and agree a repeatable recovery procedure, including responsibilities and target recovery times.
- Safeguarding and counseling information must be restricted by need-to-know access. Such information must not appear in parent/student portals or broad dashboards.
- Provide an incident reporting and escalation procedure for suspected unauthorized access, data loss, malware, exposure or service compromise. Notify LIA promptly under the timeframes agreed in the contract.
- Document data retention, deletion, export and user access request processes, including any platform limits.
- Disclose use of AI services, external APIs, analytics, third-party messaging, storage or other services that may receive LIA data. Do not send sensitive LIA data to an external service without LIA's prior written approval.
- Use production data only where authorized. Use masked or synthetic data for development and demonstrations wherever practicable.
- Ensure supplier staff access is individually assigned, limited to necessary tasks, time-bounded where feasible and removed when no longer required.
- Support privacy principles such as purpose limitation, data minimization, confidentiality and accountability, and comply with applicable Ethiopian law and other requirements expressly agreed by the parties.

11. Non-Functional Requirements

Area	Minimum requirement	Evidence / verification
Performance	Supplier to demonstrate acceptable response times for common workflows under LIA's agreed user load. The prior TOR's target of 1,000 concurrent users must be treated as a target to validate, not as proven capacity without evidence.	Load/performance test report; agreed test profile and results.
Availability	Supplier to propose and contractually confirm availability target, planned maintenance, monitoring and exclusions. The prior TOR target of 99.5% uptime requires explicit confirmation for the chosen hosting model.	Written SLA and monitoring/reporting approach.
Scalability	Support growth in student, staff, parent, file and transaction volumes within the proposed architecture.	Capacity assumptions and scaling plan.
Compatibility	Support current mainstream desktop browsers and relevant Android/iOS access as described in the product proposal.	Browser/device test record.
Usability	Common workflows should be understandable to intended users; error messages and help materials should be clear.	Role-based user acceptance tests.
Reliability	Prevent silent loss or duplication of records during routine use, imports and integrations.	Scenario tests, logs and reconciliation reports.
Maintainability	Provide version/update process, change notes, issue tracking and a rollback approach for significant updates.	Operations and release documentation.
Backup and recovery	Daily backup/snapshot process as agreed, with documented restoration steps and a successful pre-go-live restore test.	Backup logs and restore-test record.
Auditability	Important actions and permission changes traceable where supported.	Audit-log demonstration and sample review.

12. Implementation Methodology and Governance

Phase 1 — Inception and requirements validation

Hold a kickoff; confirm stakeholders, module configuration, academic structure, data sources, role matrix, integrations, hosting, risks, dependencies and acceptance approach. Produce a signed requirements and configuration baseline.

Phase 2 — Configuration and agreed customization

Configure the 49 included modules, LIA branding, terms, grading rules, approval workflows, roles, notifications, reports and hosting. Record any requirement that cannot be met natively, with an agreed workaround or change request.

Phase 3 — Data preparation and migration

Prepare templates, map data, run test imports, reconcile counts and errors, obtain LIA approval and complete the approved production migration plan.

Phase 4 — Functional, integration, security and performance testing

Execute documented test cases across module workflows, permissions, integrations, import/export, backups and agreed performance scenarios. Fix defects and retest.

Phase 5 — User acceptance testing (UAT)

LIA's designated users test agreed business scenarios using representative data. Supplier records each defect, priority, owner and resolution. Go-live requires formal LIA acceptance.

Phase 6 — Training and go-live readiness

Train each role group, deliver manuals and quick guides, confirm support contacts, verify backups and rollback arrangements, and conduct a go/no-go review.

Phase 7 — Deployment and stabilization

Deploy the approved production configuration, monitor the service, address defects, provide agreed post-go-live support and hand over operations documentation.

The detailed schedule, milestone dates, named owners and duration of any stabilization period shall be agreed in the implementation plan and incorporated into the signed agreement or approved project plan. This TOR does not invent a delivery date that is not confirmed by the parties.

12.1 Governance and reporting

- LIA shall nominate a project owner and functional focal points for IT, academics, student affairs, QA, library, store/procurement and other included functions.
- MaJo Bridge shall nominate a project manager and technical lead with authority to coordinate delivery and resolve issues.
- Maintain a decision log, action log, risk/issue register, change register, defect register and milestone status report.
- Hold progress meetings at a cadence agreed at kickoff. Escalate blockers, security concerns and schedule risks promptly.
- Any decision affecting excluded scope, data location, recurring charges, third-party access or acceptance criteria requires written approval from authorized representatives.

13. Deliverables

ID	Deliverable	Minimum contents
D1	Inception report and approved implementation plan	Scope confirmation, schedule, roles, governance, risks, dependencies and communications.
D2	Requirements and configuration baseline	Module-by-module configuration decisions, workflow diagrams, role matrix, grading rules and unresolved gaps.
D3	Hosting and architecture pack	Architecture diagram, data-flow map, hosting/data-location matrix, network prerequisites, external services and responsibility matrix.
D4	Configured 49-module platform	LIA-branded and configured production-ready instance for the agreed modules; excluded modules disabled or inaccessible.
D5	Data migration package	Templates, mappings, test-import report, reconciliation results, exception log and approved migration record.
D6	Integration specification and test evidence	Data exchanged, triggers, error handling, limitations and test results for agreed included-module integrations.
D7	Security and access-control pack	Approved role matrix, permission test evidence, backup/restore process, incident escalation procedure and privacy/data handling notes.
D8	Testing package	Test plan, test cases, functional/integration/security/performance evidence, defect register and retest results.
D9	UAT and go-live sign-off pack	UAT scenarios, user feedback, open-defect list, risk acceptance where applicable and go/no-go approval.
D10	Training and user documentation	Administrator/IT guide, teacher guide, parent/student guides, module-specific quick references and training attendance.
D11	Operations and support handover	Support contacts, escalation matrix, update/maintenance process, backup schedule, recovery steps, monitoring guidance and known limitations.
D12	Final handover and acceptance report	List of delivered modules, configuration baseline, outstanding items, export

		instructions, account handover and acceptance record.

14. Testing and User Acceptance

MaJo Bridge shall prepare a test plan and test cases traceable to the module requirements and cross-cutting requirements in this TOR. LIA shall nominate users to participate in UAT. Supplier claims that a module is already implemented do not remove the requirement to test it in LIA's configured environment.

- Functional testing: verify each included module's principal workflows, validation, search, status changes and reports.
- Integration testing: verify data consistency across related included modules and document error/retry behavior.
- Permission testing: test positive and negative access cases for administrators, teachers, parents, students, QA, support and safeguarding roles.
- Migration testing: reconcile source and destination counts and sample key fields; resolve or document exceptions.
- Security testing: check HTTPS, privileged access, role restrictions, safeguarding isolation, audit records and backup/restore procedure.
- Compatibility testing: verify agreed desktop browsers and mobile access paths.
- Performance testing: test agreed high-use scenarios and document the test data, concurrent-user profile, response times and limitations.
- Recovery testing: demonstrate a restore from backup/snapshot and document the outcome.
- Hybrid-hosting testing: verify the approved data-placement matrix, confirm sensitive records remain authoritative on the LIA server, verify no unauthorized cloud master/copy exists, test approved parent publication, confirm role and tenant isolation, and document expected behavior during loss of internet or either environment.
- Verify that the designated LIA IT lead can perform the agreed backup and restore procedure using documented instructions, that a restore is successful, and that backup copies are protected against unauthorized access. Test that supplier support cannot browse named sensitive records from the cloud console and that privileged access/MFA and audit logging operate as approved.
- Regression testing: repeat relevant tests after fixing defects or changing configuration.

14.1 Defect classification

- Critical: prevents a core business process or exposes sensitive data; must be resolved before go-live.
- High: materially impairs a major workflow or produces materially incorrect results; must be resolved before go-live unless LIA formally accepts a documented workaround and risk.
- Medium: limited impact with a reasonable workaround; resolution date must be agreed and recorded.
- Low: cosmetic or minor issue; may be scheduled after go-live by mutual agreement.

UAT shall be considered passed only when all critical and high defects are closed or formally accepted in writing by LIA, agreed core workflows pass, access-control tests pass, migration reconciliation is approved and the required handover materials are delivered.

15. Training, Documentation and Change Management

- Deliver role-based training for platform administrators/IT, academic leaders and department heads, teachers, admissions/registrar users, student affairs/support and safeguarding personnel, QA, library, store/procurement users, parents and students as applicable.
- Training shall use LIA-configured workflows and include practical exercises, not only demonstrations.
- Provide training materials in electronic form and record training dates, audience, topics and attendance.
- Provide a clear user guide for each role group and an administrator/IT guide covering user management, permissions, imports, exports, backups, troubleshooting and escalation.
- Explain what is included, what is excluded and how users should handle workflows that touch excluded modules.
- Changes to workflows, permissions, grading logic, data location or integrations after baseline approval must be documented and approved through change control.

16. Support, Maintenance and Service Management

The final agreement must specify the support period, coverage hours, channels, response and resolution targets, included updates, maintenance windows, warranty/defect correction and any fees. The supplier's proposals mention ongoing technical support but the one-time financial proposal expressly excludes annual support retainers and recurring hosting/SMS/payment-gateway charges. Therefore, no recurring service or charge is deemed agreed by this TOR unless documented in the signed commercial agreement.

The Hybrid Hosting Addendum proposes support from Monday to Saturday, 09:00–18:00 East Africa Time. LIA must expressly accept or revise these hours in the signed support SLA, which must also define severity levels, response and resolution targets, after-hours/security-incident escalation, service availability, exclusions and any related fees. The proposal alone does not establish a paid recurring support obligation.

Severity	Example	Minimum handling expectation	Contract confirmation required
P1 — Critical	Platform unavailable for core users; confirmed sensitive-data exposure; major data corruption	Immediate acknowledgement and escalation; active restoration/containment until stabilized	Exact response, update frequency and restoration target
P2 — High	Major module or key workflow unusable; broad user impact	Priority handling and frequent progress updates	Exact response and target resolution
P3 — Medium	Limited workflow impairment with workaround	Scheduled remediation and status updates	Exact response and target resolution
P4 — Low	Minor issue, question or cosmetic defect	Log, prioritize and resolve through normal queue	Support channel and target response

- Supplier shall maintain a ticket/reference number for each reported issue and record severity, owner, status, action and closure.
- Supplier shall notify LIA before planned maintenance and document service interruptions.
- Security incidents and suspected data exposure must be escalated immediately through the agreed incident channel, without waiting for routine ticket handling.
- Updates must not materially alter permissions, data location or core workflows without prior notice and an agreed validation/rollback approach.
- Support scope must distinguish defect correction, user assistance, configuration changes, custom development and third-party service issues.

17. Acceptance Criteria and Completion

LIA will issue final written acceptance only after verifying the following minimum conditions:

- All 49 included modules in Appendix A have been configured or enabled for the agreed LIA workflows and demonstrated.
- The ten excluded modules are disabled/inaccessible and are not prerequisites for included workflows.
- Approved role and permission matrix is implemented, including parent/student separation and restricted safeguarding/counseling access.
- Agreed data migration has been completed and reconciled, with exceptions accepted in writing.
- Agreed integrations work and the supplier has provided test evidence and limitations.
- Critical and high UAT defects are closed or formally accepted by LIA in writing.
- Backup and restoration procedure has been documented and a restoration test demonstrated.
- The approved hybrid architecture and data-placement matrix have been delivered; sensitive-record isolation, approved publication, access controls and agreed outage/recovery scenarios have passed documented tests.
- Training, user guides, administrator/IT documentation, hosting diagram, operations handover and support escalation details have been delivered.
- Commercial matters requiring confirmation—hosting, recurring services, support duration, VAT/payment milestones and third-party costs—are recorded in the signed agreement or addendum.
- Authorized LIA representatives have signed the UAT/go-live and final acceptance record.

Go-live approval and final acceptance are separate from the supplier's assertion that a live product already exists. LIA may accept a phased go-live only where the included functions, risks, interim controls and remaining actions are documented and approved.

18. Responsibilities

LIA responsibilities	MaJo Bridge responsibilities
Nominate a project owner, functional focal points and authorized approvers.	Provide a project manager, technical lead and appropriately skilled implementation team.
Provide accurate source data, policy decisions, academic structures, grading rules and approved content.	Provide templates, data mappings, configuration options and documented limitations.
Review and approve requirements, workflows, roles, migration results and test outcomes within agreed timelines.	Configure the 49 modules, implement agreed changes and provide traceable test evidence.
Provide required infrastructure, connectivity, access and resources where assigned in the hosting responsibility matrix.	Clearly state infrastructure prerequisites and responsibilities; configure supplier-managed components.
Coordinate end-user participation and UAT; identify defects and formally accept or reject deliverables.	Train users, maintain defect/decision logs, resolve defects and provide manuals and handover materials.
Approve data location, third-party services, production access and any changes to scope or cost.	Protect LIA data, disclose subcontractors/external services and obtain written approval where required.
Provide written sign-off or documented feedback on deliverables.	Provide status reports, raise risks promptly and avoid unapproved changes or charges.

19. Assumptions, Dependencies and Constraints

- LIA will provide authorized subject-matter experts and timely decisions for workflows and data mapping.
- The platform's standard capabilities and limitations must be demonstrated; this TOR does not assume every aspirational feature in the general business proposal is available or included.
- Hosting and data placement must be agreed before migration or production data is loaded.
- Third-party SMS, payment gateway, domain, app-store, cloud, certificate or other recurring costs are not included unless explicitly listed in the signed agreement.
- Hardware procurement, CCTV equipment, GPS devices, buses and transport operations are excluded, as are the ten modules listed in Section 4.2.
- Any module dependency that requires an excluded function must be disclosed and resolved through configuration or written change control.
- The final schedule and service levels are dependent on the jointly approved implementation plan and contract.

20. Change Control

A change to the 49-module baseline, exclusions, data location, integrations, acceptance criteria, schedule or commercial obligations shall be made only through a written change request approved by authorized representatives of both parties. Each request shall describe the reason, scope, deliverables, impact on cost/tax, recurring charges, timeline, risk, testing and acceptance. No email discussion, demonstration, verbal request or supplier product update alone changes the contracted scope.

Adding any of the ten excluded modules requires an explicit written change order identifying the module, price, implementation impact, support/hosting implications and acceptance criteria. Until such change order is signed, the exclusion remains in force.

21. Commercial and Contractual Clarifications

The MaJo Bridge one-time financial proposal states that module licence and one-time customization/go-live pricing are VAT-exclusive, that the one-time implementatio and that subscription, annual support, recurring hosting, SMS and third-party payment gateway charges are outside that proposal. Because LIA's selected scope is 49 modules rather than all 59, the final module selection and total price must be set out in the approved financial schedule or signed agreement; the 59-module total must not be applied automatically.

- The signed agreement shall state the final list of 49 priced/selected modules and any included shared services or portals.
- Confirm the final one-time module licence amount, implementation/customization fee, VAT treatment, total contract value and payment milestones.
- Confirm whether hosting is on-premises, cloud/hybrid; identify any hosting retainer or recurring infrastructure charges and who pays them.
- Confirm the support/warranty duration and whether any support is included in the one-time price.

- List any third-party services, SMS, app-store, domain, certificate, gateway or other charges and obtain LIA's written approval before commitment.
- Confirm that the excluded ten modules carry no module licence or implementation charges under this TOR.
- Resolve the treatment of the Driver login portal because the associated transport/driver modules are excluded.
- Commercial schedules and signed contract terms prevail for price, payment and tax; this TOR defines functional and technical requirements.

22. Risk Management

Risk	Potential impact	Mitigation / control
Scope ambiguity	Module dependency or hidden excluded feature	Maintain signed 49-module baseline; test excluded-module isolation; use change control.
Data quality and migration errors	Duplicate, incomplete or incorrectly mapped records	Test imports, reconciliation reports, LIA approval and source-data preservation.
Unauthorized access	Sensitive student, counseling or safeguarding information exposed	Role matrix, negative permission tests, MFA for privileged accounts, audit review.
Hosting/data-location uncertainty	Sensitive records stored in an unapproved location	Approve architecture and data-location matrix before production migration.
Connectivity or service outage	Users cannot access the cloud platform	Document dependencies, monitoring, backup/recovery and outage procedures.
Unclear recurring costs	Unexpected hosting/support/SMS/gateway charges	List every recurring/third-party charge in signed commercial schedule.
Low user adoption	Users continue manual or informal workflows	Role-based training, user guides, champions and stabilization support.
Unverified performance claims	System slows under real usage	Agree load profile, perform tests and document results before acceptance.

23. Sign-off

By signing below, the parties confirm that they have reviewed this TOR, understand the 49-module scope and the ten exclusions, and agree to use it as the functional and technical baseline for implementation, testing and acceptance, subject to the final signed contract and approved change orders.

For Lebawi International Academy (LIA)	For MaJo Bridge Technologies and Events

Appendix A: Module Register — 49 Included Modules

The table below is the authoritative included-module register for this TOR. Catalogue numbers preserve the supplier's original numbering; gaps correspond to the ten excluded modules.

Original catalogue no.	Module name	Status under this TOR
1	Institution Management	Included
2	School Management	Included
5	Academic Management	Included
6	Examinations & Grade Approvals	Included
7	Weighted Markbook	Included
8	Report Cards	Included
9	Exam bank & papers	Included
10	Attendance	Included
11	Homework	Included
12	At-risk & insights	Included
13	Analytics & exports	Included
14	Classroom Teachers	Included
15	Add Teacher	Included
16	Timetable	Included
17	LMS	Included
18	Lesson plans	Included
19	Curriculum office	Included
20	Grade Workflow	Included
21	Students (SIS)	Included
22	Add Student	Included
23	Admissions	Included
24	Alumni	Included
25	Student Portal Settings	Included
26	Student Password Resets	Included
27	Student Affairs & Discipline	Included
28	Student support	Included
29	Safeguarding	Included
30	Student programs	Included
31	Parents & Link Approvals	Included
32	Transfers & Promotion	Included
34	Inventory, Procurement & Store	Included
37	Administration Staff Directory	Included
38	Add Administration Staff	Included
43	Library	Included
44	e-Books & Materials	Included
45	Announcements	Included
46	Messages	Included
47	Events	Included
48	Gallery	Included
49	Calendar	Included
50	QA Findings & Plans	Included
51	Reports & Analytics	Included
52	Maya Assistant	Included
53	Role Permissions	Included
54	Audit Log	Included
55	System Health	Included
57	Go-live & compliance	Included
58	Settings	Included
59	Dashboard / Profile	Included

Appendix B: Minimum UAT Checklist

☐ Confirm all 49 included modules are accessible to authorized roles.
☐ Confirm all ten excluded modules are not accessible and do not block included workflows.
☐ Create/import a test student and verify the student record appears correctly in authorized connected modules.
☐ Create/approve a parent link and verify that the parent can see only the linked student.
☐ Enter attendance and confirm the authorized report/analytics view reflects the attendance record.
☐ Create homework or learning material and verify access for the intended class only.
☐ Enter marks, run weighted calculations, complete approval workflow and publish a report card.
☐ Verify grade changes after publication are restricted and traceable.
☐ Run an admissions scenario from application through enrollment, including status tracking.
☐ Test a student transfer/promotion while preserving historical records.
☐ Verify a safeguarding case is visible only to specifically authorized roles.
☐ Verify student support/counseling records are not exposed through parent/student portals or broad reports.
☐ Test library lending/return and e-book/material access restrictions.
☐ Test announcements, messages, events, gallery and calendar using representative roles.
☐ Test a QA finding and action-plan workflow.
☐ Test inventory/procurement/store request, approval, receiving and issuing workflows within included scope.
☐ Test user creation, role changes, password reset and account disablement.
☐ Review audit log visibility and sample entries.
☐ Test agreed data imports and reconcile source/destination totals.
☐ Test export formats and confirm export permissions.
☐ Demonstrate backup/snapshot and restore procedure.
☐ Review hosting/data-flow diagram and verify sensitive data location against LIA approval.
☐ Run agreed performance and compatibility tests and record results.
☐ Confirm training and handover documentation have been delivered.
☐ Confirm support contacts, escalation path, warranty/support period and recurring charges are documented.
