**Document:** MB-SYS-001 · Version 1.0 · 10 November 2026, East Africa Time (Africa/Nairobi)
INSA / Hibir field: **System Description**

**Product CSMS:** PASS · Mature 86/100 · INSA Cyber Security Audit and Evaluation Guideline v1.0 · evaluation R3 · zero Major NCs on the submitted TOE

## 1. Legal identity of the operator

The operator is a legally registered Ethiopian software company. Identity below is taken from the Ministry of Innovation and Technology **Company Certificate of Professional Competence** (annex).

| | |
|---|---|
| **Registered name** | MaJo Bridge Technologies and Events P.L.C |
| **TIN** | 0109227744 |
| **MInT reference** | MINT/1428/260824/1 · issued 24 August 2026 G.C. |
| **Business type** | Software Development (Including Design, Enrichment and Implementation) — code 39141 |
| **Legal basis** | Trade Registration and Licensing Proclamation No. 980/2016, Article 42(2) |
| **Address** | Addis Ababa · Lemi Kura (Lemikura) Sub-city · Woreda/Kebele 03 · House No. new |
| **Telephone (MInT file)** | +251 911 133 548 |
| **24/7 CSO / support** | +251 911 646 444 · nabilmaya6464@gmail.com · majobridgetech@gmail.com |
| **General Manager / CSO** | Nebil Ahmed |

## 2. What the system is

**MaJo e-School Bridge (MayaBela)** is a multi-tenant school information system (web and mobile) for Ethiopian schools. Asset type: **Web Application**. Asset code: **MB-ESB-001**. Version: **1.0.6**. Live URL: **https://www.majobridge.com** (same product as https://majobridge.com). One deployment serves many school tenants. Each school's students, staff, marks, fees, and files must stay inside that school.

**In scope:** students, classes, attendance, homework, grades, admissions, parent links; fees and payments; inventory/procurement; HR/staff accounts; transport (buses, drivers, assigned passengers, GPS of that bus); restricted health, counselling, and safeguarding notes; school login with JWT school and role claims; platform-owner console to provision schools; hosted persistence and dedicated/on-prem instances for schools that cannot share the hosted tenancy.

**Out of scope:** a school's own campus CCTV, IoT, or blockchain; forcing MFA on classroom teachers, parents, students, or drivers (would lock live lessons).

## 3. How it behaves

1. **Tenant isolation.** Every persistent row carries `school_id`. A JWT from School A cannot read or write School B. Isolation is enforced in the database (row-level security), not only in the client.
2. **Need-to-know desks.** Teachers work on assigned classes. Finance records that a fee is paid. Drivers see only passengers on their bus. Parents see linked children. Admissions on the privileged path is a registrar function. Denied writes return an error and must not dump the school. Login page has no JWT: only the school logo is public; student files stay under `schools/<id>/`.
3. **Identity.** Login: School ID + username + password + role. School Admin and Finance enroll authenticator MFA. Teachers are not forced. Eight failed tries in 15 minutes lock that username+role+school only. Security changes that could stop a live school go to staging first, then a notified window.

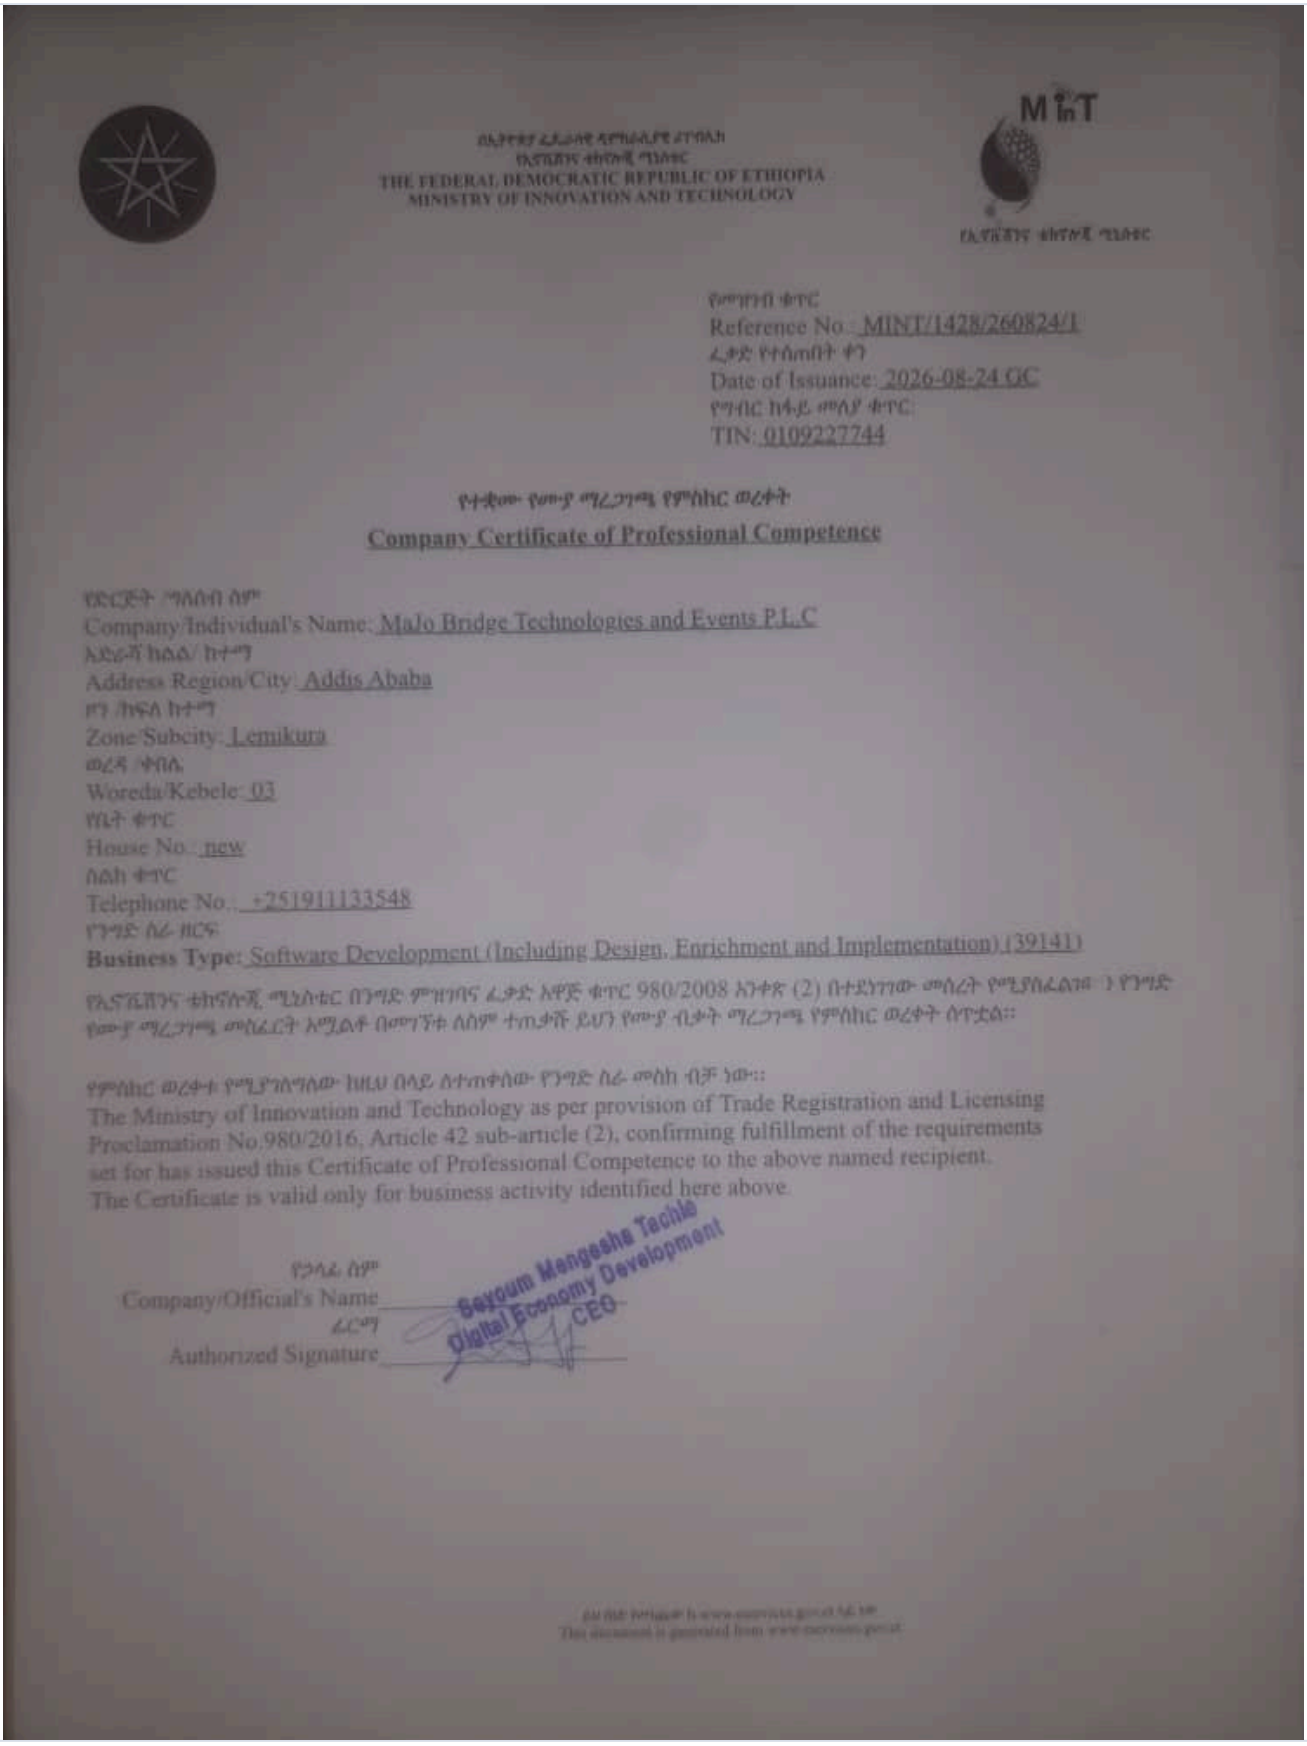

**Security:** CSMS with named CSO (General Manager until a dedicated hire), adopted policy, JWT/RLS/Edge controls, and CAAT tests (permission hardening, driver need-to-know, two-school isolation). This paper describes the system for asset

registration. It is not a gazetted INSA certificate. Related: MB-SRS-001, MB-SDD-001, MB-TDD-001, MB-UG-001, MB-SEC-001, MB-TEST-001, MB-INSA-LTR-2026-001.
