TECHNICAL PROPOSAL

MaJo e-School Bridge — the Buna Digital School Platform

Bank-sponsored school management, parent engagement and fee payment platform

Submitted to

THE BOARD OF DIRECTORS AND EXECUTIVE MANAGEMENT

BUNA INTERNATIONAL BANK S.C.

Document control	
Reference	MBT-BUNA-TEC-2026-01
Companion document	Financial Proposal MBT-BUNA-FIN-2026-01 (submitted separately)
Product	MaJo e-School Bridge (MaJo Bridge OS), version 1.0.6
Date of issue	4 November 2026
Valid until	2 February 2027
Classification	Confidential — for the Bank's Board, executive management and evaluation committee only

Board summary

Buna International Bank proposes to give schools that bank with it a complete school management platform free of charge. In return, the schools and their parents route fee payments and school finances through Buna. MaJo e-School Bridge is that platform: it is already built, in production, and runs every office of a school on web and mobile in English, Amharic and Afaan Oromo.

What the Board is asked to note

- **A ready product, not a project.** 61 modules covering academics, students, finance, HR, payroll, transport, communication and compliance are live today.
- **Every parent becomes a Buna touchpoint.** The parent app is used daily for attendance, results, messages and the school bus, so the 'Pay with Buna' button sits where parents already are.
- **Every school transaction can be a Buna transaction.** Student fees, materials, payroll, supplier payments and petty cash are already recorded in the platform's double-entry ledger; the proposed Buna integration makes Buna the default rail for each of them.
- **Multi-tenant by design.** One platform serves many schools; each school's data is separated in the database itself and checked on every request.
- **Bank-grade programme.** An independent penetration test, closure of all open audit findings, alignment with the Personal Data Protection Proclamation No. 1321/2024 and NBE expectations, and an optional Buna-dedicated environment are part of this proposal.
- **Fast to market.** Buna integration and security hardening in 8 weeks, a 5-school pilot, then rollout in waves; a new school is onboarded in about two weeks.

1. Introduction and purpose

This proposal describes the technology behind MaJo e-School Bridge, the modules and their strengths, how the platform keeps each school's data separate and secure, and how it will be integrated with Buna International Bank so that school payments flow through the Bank. Prices and commercial terms are in the separate Financial Proposal MBT-BUNA-FIN-2026-01.

1.1 About Majo Bridge Technologies and Events PLC

Majo Bridge is an Ethiopian technology company that designs, builds and operates MaJo e-School Bridge. The company owns the full source code, builds and supports the product in Addis Ababa, and deploys it for private and international schools. Because the team owns the code, the Bank deals with one accountable partner for the product, the integration, support and future development.

1.2 Scope of this proposal

- **Platform.** The complete MaJo e-School Bridge platform with all modules and portals, hosted and maintained by Majo Bridge.
- **Buna integration.** Payment references, Pay with Buna, payment confirmation, reconciliation, payroll and account-opening referral (Section 8).
- **Bank partner portal.** A Buna view of enrolled schools, adoption and aggregated payment volumes.
- **Rollout.** Pilot, school onboarding, data migration, training and support for every school the Bank introduces.
- **Assurance.** Security hardening, independent testing and the controls set out in Sections 9 and 10.

2. The partnership model

The model has three parties. Each one gains something it does not have today.

Party	Gives	Gets
Buna International Bank	Sponsors the platform for its school customers; promotes it through relationship managers and branches	Schools, parents and staff as customers; school fee and payroll flows; daily digital engagement with families; data for credit and product decisions (with consent)
School	Banks its fee collection and payroll with Buna; asks parents to pay through Buna	A full school management system at no cost; automatic fee reconciliation; less cash handling; better parent communication
Parent	Pays school fees and school purchases through Buna channels	Real-time view of attendance, results, homework, fees and the school bus; instant digital receipts; no queues at the school finance office
Majo Bridge	Provides, hosts, integrates, supports and develops the platform	A monthly fee per enrolled student, paid by the Bank (see the Financial Proposal)

2.1 How money moves

1. The school sets its fee structure in the Finance module. The platform issues an invoice per student per term or month, each with a unique Buna payment reference.
2. The parent opens the app, sees the invoice and taps Pay with Buna. The parent pays through the Buna mobile app, USSD, internet banking, a Buna branch or a Buna agent, quoting the reference.
3. Buna confirms the payment to the platform in real time through a secure interface. The invoice is marked paid, the parent receives a digital receipt, and the school's ledger is posted automatically.
4. Funds settle to the school's Buna account. Each morning the platform and the Bank exchange a reconciliation file, so the school finance office has nothing to match by hand.

5. At month end the school runs payroll in the platform and sends a bulk salary file to Buna, so staff salaries are paid into Buna accounts.

2.2 Why this works for the Bank

Benefit to Buna	How the platform delivers it
New retail customers	Every parent who signs up in the app is invited to open or link a Buna account; account-opening referrals are tracked per school
Deposits and float	School fee collections settle into the school's Buna account; payroll keeps staff salaries in Buna; parents keep balances for recurring fees
Transaction volume	Tuition, registration, transport, books and materials, uniforms, events, payroll, supplier payments and petty-cash top-ups — all can carry a Buna reference
Daily digital engagement	Parents open the app for attendance, results, messages and the bus — not only when fees are due — keeping Buna's brand in front of them every school day
Cross-sell	School-fee instalment loans for parents; salary-advance and personal loans for teachers; working-capital and asset finance for schools; savings products for students
Better credit decisions	With the customer's consent, fee-payment history and school cash flow give the Bank evidence for lending to parents and schools
Customer stickiness	A school that runs its academics, HR and finance on a Buna-sponsored platform has strong reasons to keep its banking with Buna
Brand and CSR	'Powered by Buna' on every school's app and report card; a visible contribution to the digital transformation of Ethiopian education

3. Platform overview

Dimension	MaJo e-School Bridge
Modules	61 modules in 10 groups, plus the role-based dashboard (Section 5 and Annex A)
Portals	Administration and staff web portal (ERP) · Teacher app · Parent app · Student app · Driver app · Platform console for Majo Bridge and the Bank's partner team
Devices	Web browser, Android, iPhone and iPad, Windows, macOS and Linux — one code base for all
Languages	English, Amharic (አማርኛ) and Afaan Oromo
Tenancy	Multi-tenant: one platform, many schools, strict data separation per school (Section 7)
Branding	Each school's own logo, name and colours on its login and apps; co-branding 'Powered by Buna' available
Offline tolerance	Changes are kept on the device and synchronised automatically when the connection returns
Quality	About 990 automated tests in 162 test files run on every change before release

4. Modules and their strengths

The platform has 61 modules. Each school can switch modules on or off for its own needs. The table summarises each group; Annex A lists every module.

Group	Modules	Strength for the school	Value for Buna
Organization	4	One account for a whole school group, its campuses and cameras	Group-level banking relationship
Academics	16	Timetable, markbook, exams, approvals, report cards, LMS, lesson plans	Daily parent and teacher usage
Student Services	13	Admissions to alumni; verified parent–child links; safeguarding; clinic	Verified parent identities linked to each student
Finance	2	Fees, invoices, receipts, cashboxes, expenses, budgets, payables, full ledger and statements; procurement and store	Fee, supplier and petty-cash flows on the Buna rail
HR and Transport	9	Staff, leave, contracts, payroll with Ethiopian tax and pension, buses, live GPS	Payroll accounts; transport fees

Group	Modules	Strength for the school	Value for Buna
Learning Resources	2	Library and paid e-books and materials	Small, frequent purchases
Communication	5	Announcements, events, gallery, calendar, secure messaging	Channel for Bank campaigns agreed with schools
Quality & Insights	3	QA plans, analytics, AI assistant	Aggregated insight for the partner portal
System	6	Role permissions, audit log, health, compliance	Controls the Bank's risk team expects
Account	1	Profile and two-factor authentication	Secure access

4.1 Strengths that set the platform apart

- **Complete school ERP.** Academics, student services, finance, HR, payroll, transport and communication in one product — schools do not need several systems.
- **Accounting-grade finance.** Every fee, payment, expense and payroll posts to a double-entry ledger with trial balance, income and expenditure, balance sheet and cash-flow statements, so a Buna payment confirmation lands directly in the school's books.
- **Ethiopian context.** Ethiopian payroll income tax and pension, Ethiopian Birr throughout, three local languages, and support from Addis Ababa.
- **Approval workflows.** Grades, expenses, payables, procurement, transfers and parent links all move through approval chains with a full audit trail.
- **Parents who are actually engaged.** Attendance alerts, results, homework, messages, events and the live school bus give parents a reason to open the app every day.
- **Safeguarding and privacy.** Child-protection cases, clinic notes and discipline records are restricted to named roles.
- **Works on any device.** The same platform runs in a browser and as native apps, with tolerance for unstable internet.
- **AI assistance.** The Maya Assistant helps staff find information and draft communication.

5. Technical architecture

5.1 Frontend

- **Framework.** Flutter (Dart 3) — a single code base compiled to native Android, iOS, Windows, macOS and Linux apps and to a web application.
- **Design.** Role-based dashboards, responsive layouts for phone, tablet and desktop, accessible contrast and font sizes, and per-school branding.
- **Localisation.** All screens available in English, Amharic and Afaan Oromo.
- **Resilience.** Local storage with an outbox; every change is queued on the device and synchronised every few seconds, so work is not lost when the network drops.
- **Distribution.** Google Play, Apple App Store, and web access on a school sub-domain (for example fenote-raey.majobridge.com); a Buna-branded domain can be used.

5.2 Backend

- **Database.** PostgreSQL managed through Supabase, with row-level security enforced inside the database for every table.
- **Authentication.** Supabase Auth issuing signed JSON Web Tokens (JWT) that carry the user's school and role.
- **Server functions.** 25 serverless Edge Functions (TypeScript) handle sensitive operations — school login, account creation, password reset, parent invitation and verification, school provisioning, logo upload, push notification, AI assistant and crash reporting. Privileged keys never reach the user's device.
- **Real time.** Live channels for messaging and bus GPS.

- **Files.** Private storage for school documents, served through short-lived signed links; a separate public bucket only for school logos.
- **Notifications.** Firebase Cloud Messaging for push to Android, iOS and web.
- **AI.** Google Gemini through a server function; no school data is used to train external models.

5.3 Hosting and operations

Layer	Current production	Option for Buna
Web application	Cloudflare Pages global edge network with TLS	Same, on a Buna-branded domain
Database and functions	Supabase managed cloud	Buna-dedicated Supabase project, or self-hosted in an Ethiopian data centre or Buna's own data centre
Mobile apps	Google Play and Apple App Store	Same; optional Buna co-branded build
Bank integration	—	Integration service in Buna's DMZ or Majo Bridge's environment, connected over mutual TLS and IP allow-listing
Monitoring	Crash reporting, system health page, CI checks	Plus uptime monitoring, alerting and monthly service reports to the Bank

5.4 Development and release process

- **Source control and continuous integration.** Every change runs static analysis, about 990 automated tests and a database isolation test against a staging environment before it can be released.
- **Load testing.** K6 load-test scripts exercise login, reads and synchronisation at school scale before major releases.
- **Environments.** Separate development, staging and production; database changes are versioned migrations.
- **Change control.** Changes that affect the Bank integration are released only after joint testing and the Bank's approval.

6. Multi-tenancy

Yes — MaJo e-School Bridge is a multi-tenant platform. One installation serves many schools, and each school is a separate tenant with its own data, users, settings, branding and modules.

6.1 How tenants are separated

1. Every school has a unique School ID (for example FN0597). Every record in the database carries the School ID of the school that owns it.
2. When a user signs in, the server issues a signed token that contains the user's School ID and role. The device cannot change it.
3. PostgreSQL row-level security compares the School ID on each record with the School ID in the token on every read and every write. A user of one school cannot read or change another school's data, even through a modified app — the database itself refuses.
4. An automated isolation test signs in as users of different schools and confirms that cross-school access is refused. It runs on every release.
5. Files are stored under the school's own folder and served only through signed, time-limited links.

6.2 Tenant management

- **Provisioning.** The platform console creates a new school, its administrator account, logo and module selection in minutes.

- **Per-school configuration.** Academic years, grading schemes, fee structures, approval chains, roles and permissions are set per school.
- **School groups.** A group with several schools or campuses can be managed from one institution account while each school's data stays separate.
- **Bank view.** The Buna partner portal sees only aggregated, non-personal figures for schools in the Buna programme (Section 8.4).

6.3 Deployment options for the Bank

Option	Description	When to choose
A. Shared cloud (default)	Buna schools run on Majo Bridge's managed multi-tenant platform	Fastest launch; lowest cost
B. Buna-dedicated environment	A separate database and functions used only by Buna-sponsored schools, branded for Buna	When the Bank wants its programme isolated from other schools
C. In-country / on-premises	The platform's backend installed in an Ethiopian data centre or Buna's data centre	When data-residency or NBE requirements call for it

7. Buna International Bank integration

Today schools record bank transfers and mobile-money payments in the Finance module by hand. The Buna integration replaces this with automatic, real-time confirmation from the Bank. It is the main development deliverable of this proposal and is delivered in the first 8 weeks.

7.1 Integration services

Service	What it does	Direction
Payment reference	A unique, check-digit reference per invoice or purchase, printed on the invoice and shown in the parent app	Platform → parent / Bank
Bill presentment	Buna channels (mobile app, USSD, branch, agent) look up the amount due by reference before payment	Bank → platform
Pay with Buna	Parent app hands the payment to the Buna mobile app or payment page, then returns to the receipt	Platform ↔ Bank
Payment confirmation	Real-time notification of each successful payment; invoice marked paid, receipt issued, ledger posted	Bank → platform
Reversal and refund	Reversals and refunds update the invoice and the ledger with a full trail	Bank ↔ platform
Daily reconciliation	End-of-day file or interface comparing payments; exceptions shown to the school finance office and the Bank	Bank ↔ platform
Settlement report	Daily settlement per school account, matched to the school ledger	Bank → platform
Payroll bulk file	Monthly salary file in Buna's format generated from the Payroll module	Platform → Bank
Supplier and expense payment	Approved payables and expenses exported for payment from the school's Buna account	Platform → Bank
Account-opening referral	Parent and staff consent to be contacted by Buna; referral code tracked per school	Platform → Bank

7.2 Integration security

- Mutual TLS and IP allow-listing between the Bank and the platform.
- Every message signed (HMAC-SHA256 or the Bank's standard) and time-stamped; replayed or altered messages are rejected.
- Idempotency keys so a repeated confirmation never marks a payment twice.
- No card or account credentials ever pass through or are stored in the platform; the parent authenticates only inside Buna's channels.
- Every integration message logged and kept for audit; daily reconciliation closes any gap.

7.3 Integration standards

Majo Bridge will adapt to the Bank's existing interface standard (REST/JSON, ISO 20022 messages, or file exchange over SFTP) and to the Bank's core-banking and mobile-banking platforms. Interface specifications are agreed jointly in the first two weeks.

7.4 Buna partner portal

- Schools in the programme, onboarding status and active users.
- Billable students per school (the basis of the monthly invoice to the Bank).
- Aggregated payment volume and value through Buna, by school and by channel.
- Parent account-opening referrals and conversions.
- No individual student records, grades, health or safeguarding information is visible to the Bank.

8. Security architecture

Control area	What is in place today
Identity	Individual accounts per user; passwords hashed with bcrypt (cost 12); minimum length 10 characters; temporary passwords must be changed at first login
Strong authentication	Time-based one-time-password (TOTP) two-factor authentication with recovery codes; additional PIN, stored with PBKDF2, for the platform console
Abuse protection	Rate limits on login and password reset; generic error messages that do not reveal whether an account exists
Authorisation	Role and module access matrix per school; row-level security in the database for every table
Data in transit	TLS on every connection — web, apps, database, storage and functions
Data at rest	Encrypted storage at the hosting provider; private file storage with signed, time-limited links
Secrets	Service keys held only in server functions, never in the apps
Audit	School audit log and platform audit log of sensitive actions with user, time and detail
Sensitive records	Safeguarding, clinic and discipline records limited to named roles
CCTV	Video stays on the school network; the platform stores only camera details, never footage
Secure development	Code review, automated tests and a cross-school isolation test on every release; internal security audit maintained

8.1 Bank-grade hardening programme

Before the first Buna school goes live, Majo Bridge will complete the following. Progress is reported to the joint steering committee.

Item	Deliverable	Timing
Close audit findings	Every open finding in Majo Bridge's internal security audit closed or formally risk-accepted by both parties	Weeks 1–6
Independent penetration test	Test of the web, mobile apps, functions and Buna interface by a firm acceptable to the Bank; critical and high findings fixed and retested	Weeks 6–8
Bank security review	Buna's information-security team reviews the architecture, the test report and these controls	Week 8
Two-factor authentication	Mandatory for school administrators, finance officers and platform staff	Before pilot
Backup and recovery	Daily backups with point-in-time recovery; recovery point objective 24 hours or better; recovery time objective 8 hours; restore drill twice a year	Before pilot, then ongoing
Incident response	Written plan; notification of the Bank within 24 hours of a confirmed incident affecting Buna schools	Before pilot
Annual assurance	Yearly penetration test and security review	Every year

9. Data protection, ownership and compliance

- **Ownership.** Each school owns its data. Majo Bridge processes it on the school's behalf and only to provide the service.
- **Bank access.** The Bank receives aggregated programme figures and the payment information for its own transactions. Personal data of parents and staff is shared with the Bank only with their recorded consent (for example, for account opening).
- **Children's data.** Student records are never used for marketing. Grades, health, discipline and safeguarding information are never shared with the Bank.
- **Law and regulation.** The programme will follow the Personal Data Protection Proclamation No. 1321/2024 and the directives of the National Bank of Ethiopia that apply to the Bank's outsourcing and digital channels. Majo Bridge will sign the Bank's data-processing and confidentiality agreements.
- **Data residency.** Deployment option C (Section 7.3) keeps all data inside Ethiopia if the Bank requires it.
- **Exit.** A school, or the Bank for the programme, can receive a complete export of its data in standard formats at any time and on termination.

10. Service levels and support

Item	Commitment
Availability	99.5% per month for the platform, excluding announced maintenance outside school hours
Support hours	Monday to Saturday, 8:00–18:00 East Africa Time; critical incidents 24 × 7
Channels	Phone, Telegram/WhatsApp, e-mail and in-app; a named account manager for the Bank
Response — critical (platform or payments down)	30 minutes; workaround within 4 hours
Response — high (one module or one school affected)	2 hours; fix within 1 working day
Response — normal (question or minor defect)	1 working day; fix in the next release
Reporting	Monthly service report to the Bank: uptime, incidents, tickets, adoption, payment volumes
Updates	Regular feature and security updates at no extra cost; changes affecting the Bank interface agreed in advance

11. Implementation plan

Phase	Weeks	Main activities	Exit criteria
0. Agreement	—	Partnership agreement, data-processing agreement, steering committee named	Signed agreements
1. Integration and hardening	1–8	Interface specification; build of payment reference, confirmation, reconciliation, payroll file and partner portal; security programme; joint testing in the Bank's test environment	Joint test passed; penetration test cleared; Bank security sign-off
2. Pilot	9–16	Five schools chosen by the Bank onboarded, data migrated, staff and parents trained, live payments	Pilot report: adoption, payments through Buna, issues closed
3. Rollout wave 1	17–28	Schools introduced by Buna relationship managers onboarded in batches	Agreed number of schools live
4. Scale	29 onward	Continuous onboarding; quarterly product roadmap reviewed with the Bank	KPIs in Section 12

11.1 Onboarding one school (about two weeks)

1. Kick-off with the school leadership and the Buna relationship manager.

2. School created in the platform; branding, academic year, grades, subjects and fee structure configured.
3. Students, parents, staff and opening balances imported from the school's spreadsheets.
4. Training for administrators, finance officers, teachers and the school's IT focal person; short guides and videos for parents.
5. Parent invitation campaign with Buna: download the app, link children, pay the first invoice with Buna.
6. Go-live, then two weeks of close support.

12. Governance and key performance indicators

A joint steering committee of the Bank's digital banking, retail, IT, risk and compliance leads and Majo Bridge's management meets monthly during the first year, then quarterly.

KPI	Measured by
Schools live in the programme	Partner portal
Share of school fee value paid through Buna	Reconciliation reports
Parents active in the app each month	Platform analytics
New Buna accounts referred by the platform	Referral tracking and Bank records
Staff paid through Buna payroll	Payroll files
Platform availability and incident response	Monthly service report

13. Risks and mitigation

Risk	Mitigation
Schools slow to adopt	Bank relationship managers and Majo Bridge onboarding team work together; pilot results used as proof; training and parent campaigns
Parents keep paying in cash	Pay with Buna inside the app, instant receipts, reminders, and optional Bank incentives for digital payment
Integration delays	Interface agreed in week 2; manual recording remains available as a fallback, so schools are never blocked
Security or privacy incident	Hardening programme, independent testing, two-factor authentication, incident plan with 24-hour notification
Internet instability at schools	Offline-tolerant apps with automatic synchronisation
Dependence on one supplier	Source-code escrow option, full data export, documented operations handbook

14. Why Majo Bridge

- A complete, working product already in use by schools — the Bank is not funding a development project.
- One local team that owns the code, so integration and changes are fast.
- A finance module built on accounting principles, ready to receive bank payment confirmations.
- Multi-tenant architecture with database-level isolation, proven by automated tests on every release.
- Commitment to the Bank's security, compliance and service standards set out in this proposal.

Annex A — Full module list

#	Group	Module	What it does
1	Organization	Institution Management	Group-level view of every school, campus and head office in one tenant.
2	Organization	School Management	School profile, academic years, terms, grading schemes and branding.
3	Organization	Campus Management	Several campuses under one school with their own classes and staff.
4	Organization	CCTV	Register any number of school cameras; footage stays on the school network.
5	Academics	Academic Management	Grades, sections, subjects and teacher allocations.
6	Academics	Examinations & Grade Approvals	Exam schedules with head-of-department and principal approval.
7	Academics	Weighted Markbook	Continuous assessment with weights per task and automatic totals.
8	Academics	Report Cards	Branded report cards generated from approved marks.
9	Academics	Exam bank & papers	Question bank and exam paper preparation.
10	Academics	Attendance	Daily and per-period attendance with parent notification.
11	Academics	Homework	Assignments, submissions and marking.
12	Academics	At-risk & insights	Early warning on attendance and results falling behind.
13	Academics	Analytics & exports	Class and subject analytics with spreadsheet export.
14	Academics	Classroom Teachers	Teacher directory and workload.
15	Academics	Add Teacher	Guided teacher onboarding with secure first login.
16	Academics	Timetable	Class and teacher timetables without clashes.
17	Academics	LMS	Online courses, lessons, quizzes and learning materials.
18	Academics	Lesson plans	Plans submitted, reviewed and shared with students.
19	Academics	Curriculum office	Curriculum coverage and quality review.
20	Academics	Grade Workflow	Marks move from teacher to approval to publication with a full trail.
21	Student Services	Students	Student information system with documents and history.
22	Student Services	Admissions	Online application, review and enrolment.
23	Student Services	Alumni	Graduates kept in touch with the school.
24	Student Services	Add Student	Fast single or bulk enrolment.
25	Student Services	Student Portal Settings	Controls what students see and do in their app.
26	Student Services	Student Password Resets	Secure, audited password resets for students.
27	Student Services	Student Affairs & Discipline	Incidents, actions and parent communication.
28	Student Services	Student support	Counselling and support plans.
29	Student Services	Clinic reports	School clinic visits and health notes.
30	Student Services	Safeguarding	Confidential child-protection cases with restricted access.
31	Student Services	Student programs	Clubs, sports and special programmes.
32	Student Services	Parents & Link Approvals	Parents verified and linked to their children before they see any data.
33	Student Services	Transfers & Promotion	End-of-year promotion and transfers with approval.
34	Finance	Finance	Fee structures, student invoices, payments with receipt numbers, cashboxes, expenses with approval, budgets, payables, double-entry ledger, trial balance, income and expenditure, balance sheet, cash flow, and parent fee statements.
35	Finance	Inventory, Procurement & Store	Purchase requests, approvals, suppliers, store stock and issues.
36	Human Resources and Transport	Human Resource	Staff records, positions and documents.
37	Human Resources and Transport	Leave & contracts	Leave requests, approvals and contract tracking.
38	Human Resources and Transport	Payroll	Monthly payroll with Ethiopian income tax and pension, payslips and Excel/PDF export.
39	Human Resources and Transport	Administration Staff Directory	Non-teaching staff with their roles.
40	Human Resources and Transport	Add Administration Staff	Guided onboarding with role-based access.
41	Human Resources and Transport	Transport	Routes, stops and student assignments.
42	Human Resources and	Buses	Fleet register and capacity.

#	Group	Module	What it does
	Transport		
43	Human Resources and Transport	Live GPS	Parents see the school bus on a live map.
44	Human Resources and Transport	Register Driver	Driver accounts for the driver app.
45	Learning Resources	Library	Catalogue, loans and returns.
46	Learning Resources	e-Books & Materials	Digital books and paid learning materials.
47	Communication	Announcements	School-wide or class-specific notices with push notification.
48	Communication	Events	School events with invitations.
49	Communication	Gallery	Photos shared with families.
50	Communication	Calendar	Academic and event calendar.
51	Communication	Messages	Secure teacher–parent messaging in real time.
52	Quality & Insights	QA Findings & Plans	Quality-assurance findings and improvement plans.
53	Quality & Insights	Reports & Analytics	School-wide dashboards and reports.
54	Quality & Insights	Maya Assistant	AI assistant that answers questions and drafts content for staff.
55	System	Role Permissions	Who can see and do what, per role and per module.
56	System	Audit Log	Every sensitive action recorded with user and time.
57	System	System Health	Sync, storage and service status.
58	System	Digital operations	Operational tools for the school's IT officer.
59	System	Go-live & compliance	Go-live checklist and compliance tracking.
60	System	Settings	School-level configuration.
61	Account	Profile	Own profile, password and two-factor authentication.

Annex B — Glossary

Term	Meaning
Tenant	One school (or school group) with its own separated data inside the shared platform
School ID	Unique code that identifies a school's data, for example FN0597
Row-level security (RLS)	Database rule that checks, for every record, whether the signed-in user may see or change it
JWT	Signed token issued at sign-in that carries the user's school and role
Edge Function	Small server program that performs a sensitive operation on the server instead of on the device
Reconciliation	Daily matching of payments recorded by the Bank with payments recorded in the platform
TOTP	Six-digit code from an authenticator app used as a second sign-in factor
RPO / RTO	Recovery point objective (maximum data loss) and recovery time objective (maximum downtime) after a failure

Sign-off

Submitted on behalf of Majo Bridge Technologies and Events PLC for the consideration of the Board of Directors of Buna International Bank S.C.. This Technical Proposal is valid until 2 February 2027.
