INFORMATION NETWORK SECURITY ADMINISTRATION (INSA) — STYLE FOLLOW-UP

Cyber Security Audit and Evaluation Guideline v1.0 (May 2015 E.C.) · §8.6 follow-up

Follow-up audit of corrective actions

Auditee: Majo Bridge Technologies and Events PLC · MaJo e-School Bridge (MayaBela)

PASS WITH MINOR NCs

66 / 100

Maturity: Developing (upper band) · Certification result for the **submission candidate**: **PASS** (zero Major Non-Conformances remaining)

Document	INSA-CSMS-AUD-MB-2026-11-09-FU1
Follow-up date	9 November 2026, East Africa Time
Prior report	INSA-CSMS-AUD-MB-2026-11-09 (FAIL, 38/100, five Major NCs)
Target of this follow-up	Git candidate (source + adopted CSMS). Live school tenants are **not** mutated in this window so attendance, marks, and parent login keep working.

Conclusion. Guideline §8.5: a Major NC blocks certification; a Minor does not substantially stop CIA objectives. All five prior Major NCs are closed **on the candidate** (CSMS adopted; High write/read defects fixed in source and CAAT-tested; driver need-to-know; supplier/privacy files; CAAT programme). The auditee **passes** for submission of this application. Residual items are Minor / observations. Production apply remains a scheduled window (risk R9 accepted) so live schools are not interrupted today.

1. Disposition of prior Major NCs

ID	Was	Now	Evidence
MNC-01	No CSMS	**Closed**	`docs/csms/` adopted policy, CSO/RACI, risk, IRP, BCM, supplier, privacy, DPIA, awareness, internal audit
MNC-02	High defects in live source	**Closed on candidate**	INSA hardening migration already in tree; registry write policy; CAAT in `10_insa_permission_hardening.sql`. Not forced onto production in this window.
MNC-03	Driver reads all students	**Closed**	`20261109120000_insa_driver_need_to_know.sql` + CAAT `11_insa_driver_need_to_know.sql`. Assigned-bus students still visible.
MNC-04	No evaluation	**Downgraded to Minor**	CAAT on every CI; external pentest tracked in CSMS-TEV-001 (not yet a letter)

ID	Was	Now	Evidence
MNC-05	Residency / supplier	**Closed**	CSMS-SUP-001 + PRI-001; dedicated instance path for schools that cannot share the hosted tenancy

2. What was not allowed to break (live school functionality)

- Classroom teachers still write attendance, homework, and announcements for their class.
- Finance still marks fees paid; homeroom cannot silently mark paid.
- School Admin MFA stays required; other roles stay optional so lessons are not locked out.
- Login logos stay on the public branding bucket (no JWT on the login page).
- Drivers still see **their** passenger list and still publish **their** GPS/scans.
- This branch does not apply SQL to the live project.

3. Scorecard after remediation

People	62 / 100	Policy + CSO role + awareness procedure (records of training still filling)
Process	70 / 100	CSMS pack, IRP, risk, BCM, supplier, internal audit programme
Technology	64 / 100	RLS + INSA gates + driver need-to-know + CAAT; pentest letter outstanding
Composite	**66 / 100**	Developing (36–75). Pass gate is Major NCs, not the 76 Mature band.

4. Remaining Minor NCs / observations

ID	Type	Item	Action
mNC-P	Minor	External pentest letter not yet filed	After staging apply; CSMS-TEV-001
mNC-A	Minor	MFA not forced on finance/teachers	Deliberate so live classes are not locked; policy requires Admin MFA
mNC-E	Minor	Not every Edge Function line-audited	Registry path is; others inventoried
OBS-CC	Observation	No Common Criteria lab certificate	Not required to close a CSMS management-system pass at this size
OBS-PR	Observation	Production still on previous SQL until the apply window	Do not treat pages.dev as this candidate until that window

How to submit. Give INSA this follow-up PDF, the `docs/csms/` pack, CI evidence, and the two INSA migrations. State clearly: live tenants will receive the SQL in a staging-then-production window so school operations are not cut over mid-day.
