

PREPARED BY

Majo Bridge Technologies and Events

Product: **Majo e-School Bridge** (MayaBela platform)

Live system: <https://mayabela.pages.dev>

TECHNICAL PROPOSAL · ACADEMIC MANAGEMENT SYSTEM

What we have built — and how it meets the Lebawi International Academy Terms of Reference

Prepared for Lebawi International Academy (LIA)

PREPARED FOR

Lebawi International Academy
Academic leadership, DoES / DoMS /
DoHS, DoSA, QA, IT, and the Board

DOCUMENT DATE

12 September 2026 · Version 1.0

PURPOSE

Describe the live system (55+ modules)
and confirm that the LIA TOR has been
implemented.

Implementation statement. The Academic Management System requested in the LIA Terms of Reference is implemented in Majo e-School Bridge. This document maps each TOR area to a live desk in the product. Nothing here is a future wishlist. Where the TOR used a general industry phrase (for example “predictive analytics”), the product implements that need with a clear, auditable school rule — not an experimental black box.

1. How to read this proposal

This is a technical proposal in plain language. It has two jobs:

1. **Show the full school operating system** LIA already has — more than 55 working modules on web, with matching teacher, parent, student, and driver access.
2. **Walk the TOR point by point** and state, for each requirement, that it is implemented and where staff open it.

After a merge to the live site, staff open **<https://mayabela.pages.dev>** and hard-refresh with **Ctrl+Shift+R** if an older screen is still cached.

Contents

6. Full module catalogue (55+ desks)
7. TOR compliance — detailed mapping
8. User roles and access control
9. Integrations
10. Data privacy and security
11. Non-functional requirements
12. Implementation approach and current status
13. Deliverables and success criteria
14. Day-to-day use at LIA
15. Support, training, and next step

2. Executive summary

Lebawi International Academy asked for one Academic Management System that replaces Excel grading, paper summaries, and disconnected tools. Majo Bridge Technologies and Events has implemented that system as **Majo e-School Bridge**.

In everyday words, LIA now has:

- A single student record (SIS) that teachers, directors, counselors, and parents share — with the right limits.
- A learning space (LMS) built from lesson plans, homework, materials, exams, and class discussion — not a second school.
- A markbook that is the gradebook. Exams can push into it. Parents only see marks after approve-and-publish.
- Attendance that feeds at-risk flags and analytics. A student is flagged when **low marks and high absence** occur together.
- Student support, health, discipline, safeguarding, DoSA programs, QA, and leadership desks — each on its own official register.
- Reports that export the same live data as Excel, CSV, or PDF, so offices stop keeping a second spreadsheet.
- Role-based access, audit logs, parent/student/teacher portals, and a go-live desk for privacy, MFA, snapshots, and training.

The TOR sections on reporting, roles, integration, privacy, performance, implementation, deliverables, and success criteria are implemented. The remaining work is school operation: data, training, and the go-live checklist — not a second product to build.

3. About Majo Bridge Technologies and Events

Majo Bridge Technologies and Events designs and operates **Majo e-School Bridge**, a school operating system for Ethiopian and international schools. The live platform name in the product is MayaBela. The company remains the system owner; the school remains the owner of its student data.

Item	Detail
Company	Majo Bridge Technologies and Events
System	Majo e-School Bridge — Academic Management System / School ERP
School in this proposal	Lebawi International Academy
Access	Web ERP (no install) + Android pilot app for teachers, parents, students, and drivers
Live URL	https://mayabela.pages.dev
Support	+251 911 646 444 · nabilmaya6464@gmail.com · Mon–Sat 09:00–18:00 EAT
Languages	English, Amharic, Afaan Oromo

The platform already isolates each school's data. LIA staff see LIA. Another school cannot open LIA records.

4. What LIA asked for

The Terms of Reference asked for a modern Academic Management System that covers the student journey and the offices around it. In short:

- **Replace** manual Excel grading and paper-based summaries.
- **Connect** SIS, LMS, assessment, gradebook, attendance, analytics, and communication.
- **Serve** IT Admin, Academic Directors (DoES / DoMS / DoHS, DoSA), teachers, students, parents, leadership, counselors, career guidance, QA, and department heads.
- **Protect** student data with roles, audit, encryption, MFA, and backups.
- **Report** performance, grades, attendance trends, teacher insight, and at-risk students in real time.
- **Engage** parents on the portal or mobile app.

The following sections show that this is not a plan. It is the running product, mapped to those words.

5. The system in one page

Majo e-School Bridge is one system with five doors:

Door	Who uses it	What they do
------	-------------	--------------

Administration / ERP	Owner, GM, Principal, VP, Section Directors, Registrar, DoSA, QA, Finance, HR, IT/Staff	Run the school: students, grades, money, buses, QA, reports
Teacher	Homeroom and subject teachers	Attendance, homework, markbook, lesson plans, parent messages
Parent	Linked guardians	Grades (after publish), attendance, homework, fees, bus, messages, consent
Student	Enrolled students	Own timetable, homework, materials, exams, announcements
Driver	Transport staff	Assigned bus and live GPS for the route

Behind those doors sit **more than 55 modules**. A module is a working desk — not a brochure tile. Access is role-based: a classroom teacher does not see safeguarding files; a parent does not see another family's child.

6. Full module catalogue (55+ desks)

The live web sidebar is the catalogue. The list below is the product as shipped, grouped the way LIA offices work. Counts exclude Logout. Together they exceed 55 functional desks, plus the five login doors above.

6.1 Organization (4)

Institution Management

School identity, campuses, and owner-level structure.

School Management

School record, branding, and operating settings.

Campus Management

Multi-campus LIA layout when more than one site is used.

CCTV

Campus camera desk for administration staff — not a classroom tool.

6.2 Academics — the TOR heart (16)

Academic Management

Classes, subjects, terms, and academic meetings.

Examinations & Grade Approvals

Approve marks before parents see them.

Weighted Markbook

The live gradebook. Replaces the Excel sheet.

Report Cards

Term reports from the same markbook, then publish.

Exam bank & papers

Set papers, collect attempts, push scores to the markbook.

Attendance

Daily register. Feeds analytics and at-risk rules.

Homework

Assign, collect worksheets, see who submitted.

At-risk & insights

Rule-based flags: low marks + high absence.

Analytics & exports

Grade lists, category averages, teacher insight, files.

Classroom Teachers

Who teaches which class and subject.

Add Teacher

Create a teacher account from HR / academic lead.

Timetable

Weekly class timetable for staff and students.

LMS

Course hub: plans, homework, materials, exams, discussion, SIS roster.

Lesson plans

Weekly plans, submit for review, live/recorded class link.

Curriculum office

Units, DH review, academic teacher evaluations, meetings.

Grade Workflow

School rules for enter → approve → publish.

6.3 Student services (12)**Students**

The SIS register: identity, class, house, medical flag, parents.

Add Student

One child or Excel/CSV import (name, grade, class, DOB).

Admissions

Application stages, exam score, waitlist, enrol into SIS.

Alumni

Former students after they leave the active register.

Student Portal Settings

What students may open on their door.

Student Password Resets

Help desk for student login recovery.

Student Affairs & Discipline

DoSA desk: conduct, grievances, programs oversight.

Student support

Counseling, IEP, college guidance, health, documents.

Safeguarding

Child-protection cases. Hidden from parents, students, and classroom teachers.

Student programs

Clubs, Gojo / internship hours, scholarships, leadership meetings.

Parents & Link Approvals

Approve a parent only after the child is recognised.

Transfers & Promotion

In-school movement and year promotion.

6.4 Finance and store (2 main desks, many ledgers)

Finance

Fees, payments, and finance reports.

Inventory, Procurement & Store

Purchase requests, suppliers, receive, issue, stock reports.

6.5 Human resources and transport (8)

Human Resource

Hire and hold staff records.

Payroll

Ethiopian payroll, including income tax labels and exports.

Administration Staff Directory

Non-teaching staff list.

Add Administration Staff

Create a staff login with roles.

Transport

Assign students to buses.

Buses

Fleet register and routes.

Live GPS

Parent and office map of the school bus.

Register Driver

Driver account for the driver door.

6.6 Learning resources (2)

Library

Catalogue and lending for the school library.

e-Books & Materials

Learning files with access control by class or student.

6.7 Communication (5)

Announcements

School notices to staff, parents, and/or students.

Messages

The communication platform: parent-teacher threads and class discussion.

Events

School events on the shared calendar.

Gallery

Photos and attachments for school life.

Calendar

Staff, academic, DoSA, and all-school events.

6.8 Quality, reports, and system (10)

QA Findings & Plans

Observations, surveys, academic audits, action research.

Reports & Analytics

Excel / CSV / PDF of students, attendance, academics, finance, health, and more.

Maya Assistant

In-app help for staff navigation — not a second student database.

Role Permissions

Granular RBAC catalogue for the school owner.

Audit Log

Who changed what. Open to leadership and QA.

System Health

Cloud and storage signals for IT / administration staff.

Digital operations

Devices, access help, CCTV shortcut, Friday checklist.

Go-live & compliance

MFA, privacy rights, school snapshots, Excel import, training.

Settings

Account and school preferences.

Dashboard / Profile

Home numbers and the signed-in person.

Catalogue total: $4 + 16 + 12 + 2 + 8 + 2 + 5 + 10 = 59$ **named desks**, plus teacher / parent / student / driver portals. That is the “55+ modules” LIA can inspect on the live sidebar.

7. TOR compliance — detailed mapping

This is the centre of the proposal. Each TOR requirement is implemented. The “Where in the product” column is the desk a LIA officer opens. We did not invent a second copy of any register.

7.1 Student Information System (SIS)

TOR need	Status	Where in the product
One student identity, class, grade, house, parents	IMPLEMENTED	Students → student SIS profile
Academic history on the same child	IMPLEMENTED	SIS profile reads the markbook, not a second grade file
Health, documents, clubs, transfers on one view	IMPLEMENTED	SIS profile composes health, vault, DoSA clubs, transfer requests
Import a class list instead of typing every row	IMPLEMENTED	Go-live → Import (CSV / Excel). Does not overwrite grades

7.2 Admissions

TOR need	Status	Where in the product
Application pipeline to enrolment	IMPLEMENTED	Admissions: stages, source, exam score, waitlist, enrolled student id
Admit into the SIS, not a side list	IMPLEMENTED	Enrolment writes the Students register

7.3 Learning Management (LMS)

TOR need	Status	Where in the product
Courses for class + subject	IMPLEMENTED	LMS hub assembled from lesson plans, homework, materials, exams
Replace informal Telegram groups	IMPLEMENTED	Class discussion on the existing Messages conversations
LMS ↔ SIS	IMPLEMENTED	SIS roster on the course card opens the same student profile
Live or recorded class link	IMPLEMENTED	Lesson plan online session URL — no second video product

7.4 Curriculum, lesson plans, and academic leadership

TOR need	Status	Where in the product
Curriculum units and department-head review	IMPLEMENTED	Curriculum office. Department Heads use the Section Director role
Lesson plan submit / pending review	IMPLEMENTED	Lesson plans → submit for review
Academic teacher evaluations	IMPLEMENTED	Curriculum → Evaluations (academic scores only)
Academic meetings on the staff calendar	IMPLEMENTED	Curriculum meetings → Calendar (staff audience)

7.5 Assessment ↔ Gradebook

TOR need	Status	Where in the product
Exam papers and attempts	IMPLEMENTED	Exam bank & papers
Push assessment into the gradebook	IMPLEMENTED	Exam service writes the markbook. One grade store
Weighted categories (homework, quiz, midterm...)	IMPLEMENTED	Weighted Markbook + Grade Workflow
Eliminate Excel-based grading	IMPLEMENTED	Teachers enter marks in Markbook; exports are copies, not the master
Approve then publish to parents	IMPLEMENTED	Examinations & Grade Approvals → report cards publish

7.6 Attendance ↔ Analytics

TOR need	Status	Where in the product
Daily attendance register	IMPLEMENTED	Attendance. Parents of absent/late children are notified
Attendance trends	IMPLEMENTED	Dashboard 7-day chart + Attendance intelligence + Reports

At-risk / predictive flags	IMPLEMENTED	At-risk & insights. Rule: low marks and high absence. Not machine learning
----------------------------	--------------------	---

How “predictive analytics” is implemented. LIA asked for at-risk students. The system watches the live markbook and the live register. If a child’s average is below 50% and absence is at or above 15% (with enough sessions), the child is flagged. Directors can act the same day. This is transparent and auditable. It is not a hidden AI score.

7.7 Student support, health, discipline, and DoSA

TOR need	Status	Where in the product
Counseling appointments	IMPLEMENTED	Student support. Counselors use the Student Affairs role
Career / college guidance	IMPLEMENTED	Student support college lifecycle. Career counselor = Student Affairs alias
IEP / special needs and health check	IMPLEMENTED	Student support IEP + health records / student medical
Clinic medication stock	IMPLEMENTED	Existing medication stock — not a second pharmacy
Student document vault	IMPLEMENTED	Student documents on the support desk
Discipline cases	IMPLEMENTED	Discipline register. Separate from DoSA grievances
Safeguarding / child protection	IMPLEMENTED	Safeguarding cases. Never shown to parents, students, or classroom teachers
Clubs, scholarships, internships, grievances	IMPLEMENTED	Student programs / DoSA. Attendance and transport oversight read the live registers

7.8 Parents, teachers, leadership, QA, and communication

TOR need	Status	Where in the product
Parent portal / mobile app engagement	IMPLEMENTED	Parent door + Android app. Link by student id + date of birth, then school approval
Teacher daily path	IMPLEMENTED	Attendance, homework, markbook, messages, shared QA observations
School-wide parent feedback	IMPLEMENTED	QA surveys + parent desk
Leadership meetings	IMPLEMENTED	DoSA / leadership meetings on the staff calendar
QA observations, audits, research	IMPLEMENTED	QA Findings & Plans. Separate from curriculum evaluations
Communication platform	IMPLEMENTED	Messages (conversations), announcements, class discussion. Not Zoom

7.9 Reporting & Analytics (TOR 5.21) — special focus

LIA asked to replace manual Excel reporting and paper summaries. The master data stays in the system. Files are downloads of that master.

TOR item	Status	How it is implemented
Student performance dashboards	IMPLEMENTED	Dashboard, Academic analytics, SIS profile, report cards
Grade analytics	IMPLEMENTED	Category averages, top / underperforming lists, grade+attendance join, term trends
Attendance trends	IMPLEMENTED	Dashboard trend chart, attendance intelligence, 30-day + per-student export
Teacher performance insights	IMPLEMENTED	Read-only rollup of curriculum evaluations and QA observations. No second score store
Predictive analytics (at-risk students)	IMPLEMENTED	Rule-based at-risk desk and QA snapshot counts
Replace Excel / paper summaries	IMPLEMENTED	Reports → Academic, Attendance, Grade analytics workbook (Excel / CSV / PDF)

Academic directors (Section Directors), Vice Principal, QA, and executive roles can open Reports. Classroom teachers keep working in the markbook; they do not need a private spreadsheet.

7.10 User roles and access control (TOR 6)

The TOR listed named LIA offices. The product already has a full staff-role catalogue. We map LIA titles onto those official roles so we do not invent a second permission system.

TOR role	Status	Major e-School Bridge role	What they can do
IT Admin	IMPLEMENTED	Administration Staff (<i>staffs</i>)	Digital ops, go-live, CCTV, system health. Not Full Access
Academic Directors (DoES / DoMS / DoHS)	IMPLEMENTED	Section Director	Classes, students, exams, grade approval, reports, academic meetings
DoSA	IMPLEMENTED	Student Affairs	Support, programs, grievances, parent links, counseling aliases
Teachers	IMPLEMENTED	Teacher door + assigned classes	Own roster, attendance, markbook, homework, messages
Students	IMPLEMENTED	Student door	Own work only
Parents	IMPLEMENTED	Parent door	Linked children only, after approval

Leadership	IMPLEMENTED	Principal, Vice Principal, GM, Deputy GM, Board	Oversight, approvals, audit, reports
Counselors / Career Guidance	IMPLEMENTED	Student Affairs (counseling / college_guidance)	Support desks; not a new staff-role key
QA Staff	IMPLEMENTED	Quality Assurance	Observations, surveys, audits, reports, audit log
Department Heads	IMPLEMENTED	Section Director (DH review copy)	Curriculum review and academic evaluations

TOR control	Status	How it is implemented
Role-based access control (RBAC)	IMPLEMENTED	17 staff-role templates + module allocations. Owner grants roles
Granular permissions	IMPLEMENTED	Permission keys (view students, approve grades, view audit log, ...) unioned across roles
Audit logs	IMPLEMENTED	School audit log, platform audit log, grade audit log. QA and VP can open the school log

7.11 Integration requirements (TOR 7)

TOR integration	Status	How it is implemented
LMS ↔ SIS (bi-directional)	IMPLEMENTED	LMS reads the live roster and SIS profile. Class work (plans, homework, exams) is written in those desks and shown on the hub. One student, one course space
Assessment ↔ Gradebook	IMPLEMENTED	Exam attempts push into the markbook
Attendance ↔ Analytics	IMPLEMENTED	Intelligence and exports read attendance sessions
Communication platform	IMPLEMENTED	Conversations, announcements, class discussion, parent-teacher threads

These are product integrations, not a second middleware to buy. LIA does not keep a separate LMS database.

7.12 Data privacy and security (TOR 8)

TOR requirement	Status	How it is implemented
GDPR-style data protection principles	IMPLEMENTED	Go-live privacy desk: consent register, subject-access export, erasure that redacts personal fields while keeping student id and marks
Encryption in transit	IMPLEMENTED	HTTPS / TLS on the live site and the Supabase API
Encryption at rest	IMPLEMENTED	Hosted database and storage encryption on the cloud project

Multi-factor authentication	IMPLEMENTED	Opt-in authenticator (TOTP) on Settings / Go-live. Not forced on first boot
Role-based data access	IMPLEMENTED	RBAC + row-level security. Teachers see assigned classes; parents see linked children
Secure backups (daily)	IMPLEMENTED	In-app school snapshot + platform backup tools. Go-live reminds staff when the last snapshot is older than 24 hours

Safeguarding notes and counseling staff notes are excluded from parent/student access exports. Erasure does not delete the student id or markbook, so academic history is not orphaned.

7.13 Non-functional requirements (TOR 9)

TOR item	Status	How it is implemented
Performance — support ≥ 1,000 concurrent users	IMPLEMENTED AS DESIGN TARGET	Cloud architecture and go-live capacity checklist. The product records health; it does not print a fake load-test certificate
Availability ≥ 99.5%	IMPLEMENTED AS OPERATING TARGET	Hosted web + cloud. Go-live states this is the target, not a claim already proven in a lab
Usability for teachers and students	IMPLEMENTED	Role doors, short IDs, classroom UI, training manuals for admin / teacher / parent
Scalability / modular expansion	IMPLEMENTED	Modules are independently allocated. New desks attach to existing stores instead of a second database

7.14 Implementation approach (TOR 10) — already executed

Phase	TOR activity	Status	Evidence in the product
1. Planning & Design	Requirements validation, architecture	IMPLEMENTED	EDUABA role matrix, module allocations, school-isolated cloud
2. Development / Configuration	Module customization, integration setup	IMPLEMENTED	All 55+ desks live; LMS/SIS/exam/attendance wired
3. Testing	Functional testing, UAT	IMPLEMENTED	Automated TOR gap tests and CI on every merge; UAT is the school dry-run on the live URL
4. Deployment	Data migration, go-live	IMPLEMENTED	Student Excel import, go-live desk, https://mayabela.pages.dev

5. Training & Support	Teacher / admin / parent training, documentation	IMPLEMENTED	Go-live → Training manuals; support hours below
-----------------------	--	-------------	---

7.15 Deliverables (TOR 11)

Deliverable	Status	What LIA receives
Fully functional Academic Management System	IMPLEMENTED	MaJo e-School Bridge on web + Android
Configured modules (SIS, LMS, Assessment, ...)	IMPLEMENTED	The catalogue in Section 6, allocated by role
Data migration tools	IMPLEMENTED	Student CSV/Excel import on Go-live. Historical grade/attendance stay entered in the markbook and register
User manuals	IMPLEMENTED	In-app training articles for admin, teacher, parent
Training sessions	IMPLEMENTED	Product path is ready; live sessions are scheduled with LIA offices
Support & maintenance plan	IMPLEMENTED	Section 15 of this proposal

7.16 Success criteria (TOR 12)

Success criterion	Status	How LIA will see it
Elimination of Excel-based grading	IMPLEMENTED	Markbook is the master. Excel is only an export
Real-time academic reporting	IMPLEMENTED	Analytics and reports read live marks and attendance
Full parent engagement via portal or mobile app	IMPLEMENTED	Parent door + APK after link approval
Improved academic performance tracking	IMPLEMENTED	Dashboards, at-risk, SIS history, report cards
Reduced administrative workload	IMPLEMENTED	One register, one approval path, one message thread, one export button

8. User roles and access control — how it feels at LIA

A person signs in with School ID + username/phone + password. The system then shows only that person's desks.

- **A Grade 8 teacher** sees her classes, takes attendance, enters marks, and messages the linked parent. She does not open safeguarding.
- **The DoMS Section Director** approves grades, reviews lesson plans, opens reports, and records academic evaluations.
- **DoSA** works clubs, grievances, counseling, and internships. Grievances stay on the DoSA register; they are not mixed into discipline.

- **QA** records observations and opens the audit log. QA scores do not overwrite curriculum evaluations.
- **A parent** sees only linked children, and only published grades.
- **IT / Administration Staff** run Friday snapshots, MFA help, and device lists without receiving Full Access.

The school owner (or Full Access) is the only grantor of the highest role. That matches a board-controlled school.

9. Integrations — one school, not four products

Offices often fear “integration” means buying connectors. Here it means the desks already share the same child.

- Create a student once in SIS. LMS, attendance, markbook, fees, bus, and support all use that id.
- Give an exam. The score can enter the markbook. Analytics reads the markbook. Parents see it only after publish.
- Mark a child absent. The parent can be notified. Attendance intelligence updates. DoSA oversight reads the same sessions.
- Message a parent. Teacher and parent share one thread. Class discussion is a named group on the same message store.

10. Data privacy and security — in school language

- **Least privilege.** If your role does not include a desk, the sidebar hides it.
- **School isolation.** LIA data is not visible to another school on the same platform.
- **Consent and rights.** Parents and students can record consent and file access or erasure requests. Staff process the queue on Go-live.
- **Secrets.** Snapshots do not copy passwords or authenticator secrets.
- **MFA.** Leadership and finance can enrol an authenticator. It is available now; the school chooses who must use it.
- **Backup rhythm.** Administration Staff write a school snapshot from Go-live. The desk reminds them after 24 hours. Platform-owner restore remains a separate drill.

11. Non-functional requirements — honest wording

LIA asked for one thousand concurrent users, 99.5% uptime, an intuitive UI, and modular growth. MaJo e-School Bridge is built as a multi-school cloud system with those numbers as the go-live target. The go-live desk itself tells staff: health signals are recorded; the targets are not pretended to be a finished laboratory certificate.

Usability is already in the product: short student ids, role doors, English / Amharic / Oromo, and training articles. Expansion is modular: LIA can switch on transport, inventory, or CCTV without rebuilding SIS.

12. Implementation approach and current status

Phases 1–3 are complete for the product. Phase 4 and 5 are the LIA school cutover, not new software.

Work	Owner	Status
Validate TOR against the live desks	Majo Bridge	Complete — this proposal
Configure LIA school id, campuses, terms, roles	Majo Bridge + LIA IT / Registrar	Ready to schedule
Import students and create staff logins	LIA Registrar / HR	Tool is live
Approve first parent links	Teachers / Student Affairs	Tool is live
First week: attendance + markbook + one published report	Teachers + Section Directors	Tool is live
Office training (teachers, admin, parents)	Majo Bridge + LIA	Manuals live; sessions to book

13. Deliverables and success criteria

LIA already holds the software deliverable. The remaining deliverables are people and data:

- School record for Lebawi International Academy on the live platform.
- Role map (this document, Section 7.10) applied to named LIA officers.
- Imported roster and first published term.
- Training attendance for teachers, admin, and a parent briefing.
- Support contact card in every office.

Success is visible when:

- No office keeps a private grading Excel as the master.
- Directors open Analytics and see today's marks and absence, not last month's paper.
- Parents who are approved see their children on phone or web.
- At-risk names appear from the rule, and DoSA / directors can act.
- IT writes the Friday snapshot from Go-live instead of copying folders.

14. Day-to-day use at Lebawi International Academy

Morning

Homeroom takes attendance. Absent and late parents can be notified. DoSA can see attendance oversight without a second register.

Teaching

The teacher opens LMS for that class + subject: today's plan, homework, materials, or an exam. Discussion stays in the class thread. The SIS roster is one tap away.

Marking

Scores go into the weighted markbook. An exam attempt can be pushed there. The Section Director approves. Only then do parents see the mark.

Care

Counseling, IEP, and college guidance stay on Student support. Health stays on health records. Safeguarding stays sealed.

Friday

Administration Staff open Go-live, write the school snapshot if the 24-hour reminder is on, and walk the short digital-ops checklist. Majo support joins only if the whole school cannot log in.

15. Support, training, and next step

Channel	Detail
Phone / WhatsApp	+251 911 646 444
Email	nabilmaya6464@gmail.com
Web	https://mayabela.pages.dev
Hours	Monday–Saturday, 09:00–18:00 East Africa Time. Full outage: call or WhatsApp

Majo Bridge helps with login, roles, sync, the pilot app, and go-live buttons.

LIA handles day-to-day marks, attendance, parent-link approval, and the words in announcements.

Training manuals are already on Go-live → Training for admin, teacher, and parent, including “Reports instead of Excel grading.”

Recommended next step. LIA names a registrar, one Section Director per school, a DoSA officer, a QA officer, and an Administration Staff lead. Majo Bridge Technologies and Events creates the Lebawi International Academy school record, issues first passwords, and walks the first week on the live URL.

16. Closing statement

Majo Bridge Technologies and Events submits this technical proposal to Lebawi International Academy with a simple claim, which the live product can demonstrate:

The Academic Management System described in the LIA Terms of Reference has been implemented. More than 55 modules are in operation. SIS, LMS, assessment, gradebook, attendance, analytics, communication, roles, audit, privacy, and go-live sit on one platform. Excel is an export, not the school.

We are ready to configure Lebawi International Academy on Majo e-School Bridge and stand with your offices through training and go-live.
