TECHNICAL PROPOSAL · SCHOOL OPERATING SYSTEM

A complete school system Fenote Raey Academy can run, adapt, and grow — not a rigid one-size product

Prepared for **Fenote Raey Academy** · ፍኖተ ራእይ አካዳሚ

PREPARED FOR

Fenote Raey Academy
Owner, Directors, Principal, Academic leadership, Registrar, Finance, HR, and IT

PREPARED BY

DOCUMENT DATE

15 September 2026 · Version 1.0

PURPOSE

Set out the live 59-module system, how Fenote Raey can switch modules on or off, and how we customise from two schools already on the same platform.

What this paper offers. Fenote Raey Academy receives a working school operating system — administration, teachers, parents, students, and drivers — with fifty-nine named desks plus four role doors. Every school does not need every desk. The platform owner turns modules on or off per school. Inside an enabled module, Fenote Raey maps its own titles, branding, grade rules, fees, buses, and reports. New desks attach to the same student record. We do not ask the Academy to buy a second product when a new office appears.

1. How to read this proposal

This is a technical proposal in plain language. It has four jobs:

1. **Show the full system** Fenote Raey can inspect today at <https://mayabela.pages.dev>.
2. **List every module** so leadership can tick what this Academy needs in year one, and what can wait.
3. **State the customization model** — adapt existing desks, and add new modules without rebuilding the school.
4. **Show experience** from two schools already configured on the same platform: Lebawi International Academy and Feleg Raye School.

Commercial price is not in this paper. Terms are agreed separately with Fenote Raey management. After a live-site update, hard-refresh with **Ctrl+Shift+R**.

Contents

1. How to read this proposal
2. Executive summary
3. About MaJo Bridge Technology and Events PLC
4. Experience in two schools
5. What Fenote Raey Academy needs — and how we answer
6. The system in one page
7. Full module catalogue (59 desks)
8. Customization: adapt existing modules and add new ones
9. Roles, isolation, and day-to-day use
10. Implementation, training, and support
11. Closing and signatures
12. Acceptance and signatures

2. Executive summary

Fenote Raey Academy is not starting from a blank drawing. MaJo Bridge Technology and Events PLC already operates **MaJo e-School Bridge** as a multi-school cloud system. Each school has its own isolated records. Staff sign in with School ID + phone/username + password. Parents see only their children. Another school cannot open Fenote Raey data.

In everyday words, Fenote Raey can have:

- One student record used by the office, the teacher, the parent, and the bus — not four spreadsheets.
- Teacher enters marks → leadership approves → then the parent sees. Draft marks never leak.
- Attendance, homework, timetable, gallery, messages, fees, inventory, HR payroll (Ethiopian income tax and pension), live bus GPS, and Admin CCTV for cameras already on campus.
- English, Amharic, and Afaan Oromo in the product.
- A module pack: Fenote Raey can run all 59 desks, or a smaller set. Later desks turn on without a migration.

We have already configured this platform for **Lebawi International Academy** (full academic operating system, TOR-mapped) and **Feleg Raye School** (school OS, branding, roles, fees, transport, and a strong customization package). Fenote Raey is the next school on the same product — with its own name, logo, classes, and module mix.

3. About MaJo Bridge Technology and Events PLC

The company designs, implements, and supports MaJo e-School Bridge. The live product name in the app is MayaBela. The company remains the system owner. **The school remains the owner of its student data.**

Item	Detail
Legal name	Majo Bridge Technology and Events PLC
Trading name	Majo Bridge Technologies and Events
General Manager	Nebil Ahmed
System	Majo e-School Bridge — school ERP / academic management system
School in this proposal	Fenote Raey Academy (ፍኖተ ራኣይ አካዳሚ)
Access	Web (no install) + Android app for teachers, parents, students, and drivers
Live URL	https://mayabela.pages.dev
Email	majobridgetech@gmail.com
Phone / WhatsApp	+251 911 646 444
Support hours	Monday–Saturday, 09:00–18:00 East Africa Time. Full outage: call or WhatsApp
Languages	English, Amharic, Afaan Oromo

4. Experience in two schools

Fenote Raey is not a first experiment. The same product is already in use and configuration for two schools with different sizes and office cultures. That is the proof that the system is modular: one platform, two packs, two brands.

4.1 Lebawi International Academy

LIA required a full Academic Management System: SIS, LMS, weighted markbook, exam bank, attendance intelligence, student support, safeguarding, DoSA programs, QA, report cards, and parent publish-after-approve. We mapped their Terms of Reference onto the live desks — not a second database. Result: more than 55 academic and student-service desks on the same student identity, with Excel as an export, not the master.

- International-school academic offices (Section Directors, DoSA, QA, counselors) mapped onto existing staff roles.
- Grade workflow: enter → approve → publish. Parents never see a draft mark.
- At-risk flags from live marks and live absence (clear school rule, not a hidden score).
- Go-live desk: snapshots, training manuals, privacy requests, MFA.

4.2 Feleg Raye School

Feleg Raye required a School Operating System across five doors (administration, teacher, student, parent, driver), with a written customization commitment: branding, campus and class naming, role mapping, fee categories, transport routes, and report preferences. Included implementation hours cover configuration and Feleg-specific adjustments so the school is not forced onto a rigid default.

- School logo and identity on the tenant the parents and staff actually open.
- Ethiopian payroll labels (income tax and pension) on the HR desk.
- Bus routes, driver accounts, and live GPS only while the driver is sharing.
- Kickoff, provisioning, training, UAT, go-live, and a hypercare window after go-live.

What this means for Fenote Raey. LIA showed the platform can carry a dense academic TOR. Feleg Raye showed it can be branded and workflow-fitted for a local school OS. Fenote Raey gets both strengths: the full catalogue if you want it, and the same customization levers (module pack, roles, logo, fees, buses, reports).

5. What Fenote Raey Academy needs — and how we answer

Fenote Raey need	How MaJo e-School Bridge answers
One system for owner, directors, teachers, parents, students, drivers	Five doors, one School ID. The sidebar changes with the person's role.
Not every school uses every office	Owner console module pack: each desk on or off for this Academy only.
Teacher work must not jump to parents too early	Approve-and-publish grades. Linked parents see published work only.
Parents must not see another family's child	Link by student ID + date of birth, then school approval.
Cameras already on campus	Admin CCTV desk for existing cameras / NVR — staff only, not a classroom toy.
Buses Fenote already runs	Fleet, passenger lists, driver QR scan, live map while sharing.
Ethiopian payroll	HR payroll with income-tax and pension labels and exports.
Amharic-speaking offices and families	Product strings in English, Amharic, and Afaan Oromo.
Start small, grow later	Pilot one campus or grade band 30–60 days, then turn on more modules.

6. The system in one page

Door	Who uses it	What they do
Administration / ERP	Owner, directors, principal, registrar, QA, finance, HR, IT	Students, grades, money, buses, CCTV, reports, roles
Teacher	Homeroom and subject teachers	Attendance, homework, markbook, lesson plans, parent messages
Parent	Linked guardians	Published grades, attendance, homework, fees, bus, behaviour, messages
Student	Enrolled students	Own timetable, homework, materials, exams, announcements
Driver	Transport staff	Assigned bus, passenger list, QR scan, live GPS

Behind those doors sit **59 named desks** (the live sidebar, excluding Logout). A module is a working desk — not a brochure tile. Fenote Raey does not have to switch all 59 on on day one.

7. Full module catalogue (59 desks)

This is the product Fenote Raey can inspect on the live sidebar. Each item can be included or excluded in the Academy's module pack. Counts exclude Logout. Teacher / parent / student / driver doors sit on top of these desks.

7.1 Organization (4)

Institution Management

Owner-level identity and structure. How Fenote Raey sits as one institution on the platform.

School Management

School record, academic year, grades, terms, contact, and operating settings. Branding and logo live here.

Campus Management

Main campus plus any second site. Students and teachers carry a campus so lists stay honest.

CCTV

Administration camera desk for cameras Fenote already owns. Not shown to parents or students as a toy.

7.2 Academics (16)

Academic Management

Classes, subjects, terms, and academic meetings. The backbone of the timetable and LMS.

Examinations & Grade Approvals

Leadership approves marks. Until then, parents and students do not see the number.

Weighted Markbook

The live gradebook. Homework, quiz, midterm, exam weights that Fenote Raey can set. Replaces Excel as master.

Report Cards

Term reports from the same markbook, then publish. No second report file.

Exam bank & papers

Set papers, collect attempts, push scores into the markbook.

Attendance

Daily register. Absent and late parents can be notified. Feeds at-risk and reports.

Homework

Assign, collect, see who submitted. Parents see posted homework, not a draft.

At-risk & insights

Flags when low marks and high absence occur together. A clear rule directors can explain.

Analytics & exports

Grade lists, category averages, teacher insight, Excel / CSV / PDF. Export is a copy, not the master.

Classroom Teachers

Who teaches which class and subject. Section Directors assign; HR hires.

Add Teacher

Create a classroom-teacher account from HR or academic lead.

Timetable

Weekly class timetable for staff, students, and parents.

LMS

Course hub for a class + subject: plans, homework, materials, exams, discussion, SIS roster.

Lesson plans

Weekly plans, submit for review, optional live/recorded class link.

Curriculum office

Units, department-head review, academic teacher evaluations, meetings.

Grade Workflow

Fenote Raey's own enter → approve → publish rules. Not a fixed foreign template.

7.3 Student services (12)

Students

The SIS: identity, class, house, medical flag, parents. One child, one id across the school.

Add Student

One child at a time or Excel/CSV import (name, grade, class, date of birth).

Admissions

Application stages, exam score, waitlist, enrol into the SIS — not a side list.

Alumni

Former students after they leave the active register.

Student Portal Settings

What Fenote students may open on their door (grades, materials, exams...).

Student Password Resets

Help desk when a student cannot sign in.

Student Affairs & Discipline

Conduct cases, leave, grievances oversight. Separate from child-protection files.

Student support

Counseling, IEP / special needs, college guidance, health records, student documents.

Safeguarding

Child-protection cases. Hidden from parents, students, and classroom teachers.

Student programs

Clubs, internships / service hours, scholarships, leadership meetings.

Parents & Link Approvals

A parent links with student ID + date of birth. The school approves before the door opens.

Transfers & Promotion

In-school movement and year promotion, with approval where Fenote requires it.

7.4 Finance and store (2)

Finance

Fee categories, payments, and finance reports. Parents see their child's fees, not the whole school ledger.

Inventory, Procurement & Store

Purchase requests, suppliers, receive, issue, stock reports. Separation of duties unless the owner allows self-approval.

7.5 Human resources and transport (8)

Human Resource

Hire and hold staff records. Teachers and administration staff in one HR branch.

Payroll

Ethiopian payroll, including income tax and pension labels, tables, and exports.

Administration Staff Directory

Non-teaching staff list for VP / HR.

Add Administration Staff

Create a staff login and attach roles (registrar, accountant, QA...).

Transport

Assign students to buses. Parents see their child's bus, not every route.

Buses

Fleet register and routes Fenote already runs.

Live GPS

Office and parent map. Shows "live" only while the driver is sharing.

Register Driver

Driver account for the driver door: route, passengers, QR scan.

7.6 Learning resources (2)

Library

Catalogue and lending for the school library.

e-Books & Materials

Learning files with access by class or named student. Teachers post; students and parents receive.

7.7 Communication (5)

Announcements

One school notice to staff, parents, and/or students — not four WhatsApp groups.

Messages

Parent-teacher threads and class discussion on one store. Teacher and parent share the same conversation.

Events

School events on the shared calendar.

Gallery

Photos and attachments for school life, with class posting rules.

Calendar

Staff, academic, student-affairs, and all-school events. Ethiopian calendar awareness where the product already supports it.

7.8 Quality, reports, and system (10)

QA Findings & Plans

Observations, surveys, academic audits, action research. Duty owner closes; directors see overdue items.

Reports & Analytics

Excel / CSV / PDF of students, attendance, academics, finance, health, and more.

Maya Assistant

In-app help for staff navigation. Not a second student database.

Role Permissions

School-owner checkboxes: which Fenote title may open which desk.

Audit Log

Who changed what. Open to leadership and QA.

System Health

Cloud and storage signals for IT / administration staff.

Digital operations

Devices, access help, CCTV shortcut, Friday checklist.

Go-live & compliance

MFA, privacy rights, school snapshots, Excel import, training manuals.

Settings

Language, security, appearance for the signed-in person.

Dashboard / Profile

Home numbers and the signed-in person. Always available — cannot be turned off.

Catalogue total: $4 + 16 + 12 + 2 + 8 + 2 + 5 + 10 = 59$ **named desks**, plus teacher, parent, student, and driver portals. Student QR (class attendance, bus board/discharge, scan-to-open profile) is part of the student and transport path, not a separate brochure product.

8. Customization: adapt existing modules and add new ones

This is the section Fenote Raey asked us to state clearly. The platform is not a locked foreign template. Customization happens on three layers, so the Academy is never told “wait for a new product.”

8.1 Layer 1 — Module pack (what exists for this school)

From the **platform owner console** (MaJo Bridge, PIN-protected — not the school admin), each of the 59 desks has an on/off switch for Fenote Raey. Dashboard, profile, settings, and logout stay on so people can still sign in.

- **All on** — Fenote Raey receives the full catalogue. New desks we ship later stay on.
- **A chosen subset** — for example year-one academics, students, messages, and finance only. Transport and inventory wait. Those desks are hidden from everyone at Fenote Raey, including the school admin.
- Turning a module on later is a switch, not a data migration. The student record is already there.

This is how two schools already differ on the same platform: LIA runs a dense academic pack; Feleg Raye is configured as a school OS with branding and operations. Fenote Raey chooses its own mix.

8.2 Layer 2 — Fit the desks Fenote already turned on

Inside an enabled module we configure, we do not rewrite the school around the software:

Customization	What Fenote Raey can change
School branding	Academy name, logo (banner or circular), contact, and how the login and shell present Fenote Raey.
Organization	Campuses, grade levels, sections, academic year and terms, class naming.
Roles and titles	Map Director, Principal, VP, Registrar, QA, accountant, homeroom teacher onto the official role catalogue. Granular permission ticks inside Role Permissions.
Grade rules	Category weights, who approves, when parents see a mark, report-card layout from the same markbook.
Student portal	Which student tiles are visible (exams, materials, attendance...).
Fees and store	Fee categories and terms; procurement self-approval on or off (owner-controlled).
Transport	Routes, buses, which students ride, driver accounts, GPS sharing rules.
CCTV	Point the admin desk at cameras / NVR Fenote already installed.
Language	English / Amharic / Afaan Oromo per user.
Reports	Which lists export, and reasonable layout preference from discovery — Excel, CSV, or PDF of the live registers.

Included implementation customization. Kickoff workshop, role map, branding, class structure, fee and bus setup, guided import, and training are part of going live. School-requested in-platform changes during implementation are scheduled in weekly sprints and are not unreasonably refused when they fit the product. A net-new desk that does not yet exist is scoped as a written change order (what, days, fee) and built onto the same student identity — see Layer 3.

8.3 Layer 3 — Ability to adapt new modules

When Fenote Raey grows a new office, we do not start a second school system. The rule is:

1. **Reuse the student (and staff) identity.** A new desk reads the same SIS. No second “Fenote student id.”
2. **Attach to an existing family** where we can (for example a new exam report still writes the markbook).
3. **Give it a sidebar id and a role allocation** so only the right Fenote titles see it.
4. **Put it on the module pack.** Fenote Raey can leave it off until the office is ready.

5. **Keep one cloud tenant.** Parents still open the same login. They simply gain a new tile if that module is on and they are allowed to see it.

Examples of new-module paths we already used on this platform (so Fenote Raey can trust the pattern):

- Exam bank pushing into the existing markbook instead of a parallel grade file.
- LMS hub assembling lesson plans, homework, materials, and exams that already existed.
- Admin CCTV as a staff desk over cameras the school already owned.
- Go-live / privacy / MFA as a compliance desk on the same school record.
- Per-school module toggles so a new desk can ship “off” until Fenote asks for it.

If Fenote Raey later needs a desk that is not in Section 7, MaJo Bridge writes a short change order, builds it on the live stores, and trains the named office. That is how the catalogue grew past 55 desks without splitting LIA or Feleg Raye into two products.

9. Roles, isolation, and day-to-day use

9.1 How a Fenote morning feels

Morning

Homeroom takes attendance. Absent and late parents can be notified. Directors see the same register — not a paper copy.

Teaching

The teacher opens LMS for that class: today’s plan, homework, materials, or an exam. Discussion stays in the class thread.

Marking

Scores go into the weighted markbook. Leadership approves. Only then do parents see the mark.

Gate and bus

The same student QR can mark class attendance and bus board/discharge. Parents see the bus as live only while the driver shares GPS.

Friday

IT / Administration Staff open Go-live, write the school snapshot, and walk a short digital-ops checklist. MaJo support joins if the whole school cannot log in.

9.2 Who sees what

- **A Grade 4 teacher** sees her classes. She does not open safeguarding or the whole finance ledger.
- **The Principal / VP** sees dashboards, grade approvals, reports, and overdue QA items.
- **Registrar** owns the student register, admissions, and parent-link queue.
- **A parent** sees only approved children, and only published grades.
- **A student** sees own work. Never another child’s mark, never a draft.
- **A driver** sees the assigned bus and passengers only.

Fenote Raey data is not visible to Lebawi International Academy or Feleg Raye School. Cross-school access is prohibited.

9.3 Security in school language

- **Least privilege.** If a desk is off in the pack, or the role does not include it, the sidebar hides it.
- **Encryption.** HTTPS in transit; hosted database and storage encryption at rest.
- **MFA.** Opt-in authenticator for leadership and finance. The Academy chooses who must use it.
- **Backups.** In-app school snapshot plus platform backup. Friday reminder when the last snapshot is older than 24 hours. Also keep a JSON copy on a school PC if Fenote policy requires it.
- **Audit.** Leadership and QA can open who changed what.

10. Implementation, training, and support

Phase	What happens for Fenote Raey
1. Kickoff & discovery	Workshop: which modules on in year one, role map, class list, fee and bus facts, logo.
2. Provisioning	Fenote Raey school record on the live platform. Admin passwords. Module pack applied.
3. Configuration & data	Branding, grades, terms, import students, create teachers and staff, parent-link rules.
4. Training	Directors, teachers, registrar, finance/HR, a parent briefing. Manuals already sit on Go-live → Training.
5. UAT & go-live	One campus or grade band, 30–60 day pilot if Fenote prefers, then expand the pack.
6. Hypercare	Intensive support after go-live so the first term is not carried by WhatsApp.

Fenote Raey provides a project owner, accurate class lists, and lawful parent consent. **Majo Bridge provides** the tenant, the pack, the training, and the support line.

Channel	Detail
Company	Majo Bridge Technology and Events PLC

Web	https://mayabela.pages.dev
Hours	Monday–Saturday, 09:00–18:00 East Africa Time. Full outage: call or WhatsApp

Recommended next step. Fenote Raey names a registrar, one academic lead, a finance/HR contact, and an IT / Administration Staff lead. We create the Academy school record, set the module pack, issue first passwords, and walk the first week on the live URL.

11. Closing statement

Majo Bridge Technology and Events PLC submits this technical proposal to Fenote Raey Academy with a claim the live product can demonstrate the same day:

The school operating system is already built. Fifty-nine modules are in the catalogue. Five doors cover the people Fenote Raey actually employs and serves. Customization is not a promise of a future rewrite: it is a module pack, a role map, branding, and a written path to add new desks onto

the same student. We have already done that work for Lebawi International Academy and Feleg Raye School.

We are ready to configure Fenote Raey Academy on Majo e-School Bridge, stamp the tenant with your identity, and stand with your offices through training and go-live.

12. Acceptance and signatures

This page is for Fenote Raey Academy to confirm that it has received this technical proposal. A signature here records receipt and intent to proceed to a live demonstration and a separate commercial agreement. It is not itself a price contract.

MaJo Bridge Technology and Events PLC stands behind the system described in this paper: the live 59-module catalogue, the three customization layers, and the same platform already configured for Lebawi International Academy and Feleg Raye School.
