User Documentation (User Guide)

User Guide

Product: MaJo e-School Bridge (MayaBela)
How the system is used in practice · misuse scenarios and user-related risks

Document number	MB-UG-001
Version	1.0 · 10 November 2026 · East Africa Time (Africa/Nairobi)
INSA portal field	User Documentation (User Guide) — describes how the system is used in practice; used to identify misuse scenarios and user-related risks.
Audience	School staff, parents, students, drivers, and MaJo support. Not a developer manual (see MB-TDD-001).
Classification	CONFIDENTIAL when stored with other CSMS files; the operational rules may be given to a school admin at go-live.

Live URL: **https://mayabela.pages.dev** (hard-refresh with Ctrl+Shift+R if the screen looks old). Dedicated/on-prem schools use their own URL and must not be mixed onto this shared site.

1. How people sign in

1. Open the school URL. The login page shows that school's **logo only** (no student names).
2. Enter **School ID**, **username**, **password**, and **role** (Admin, Teacher, Parent, Student, or Driver). The same person may have more than one role — they pick the desk they are opening.
3. First login: change a temporary password (10+ characters). Do not reuse the SMS/WhatsApp temp password.
4. School **Admin** and **Finance**: after password, open **Settings** and enroll an authenticator. Login still works with the password; the system prompts until MFA is on. Teachers, principals, parents, students, and drivers are not forced to enroll (so a teacher without a phone is not locked out of class).

Eight failed tries in 15 minutes for the same username+role+school lock that combination briefly. That is not a school-wide outage.

2. How each desk is used in practice

Who	Normal day's work in the app	Must not do
Classroom teacher	Mark attendance, set homework, enter marks for **assigned classes**, send a class notice, message linked parents.	Open another teacher's class; mark fees paid; open payroll/HR; download the whole school register "for Excel at home".
School Admin	Users, classes, year, branding, role titles; keep MFA on.	Share the admin password; grant Full Access to a teacher's own account.
Registrar	Admissions, student registry, promotions, parent links.	Let a homeroom teacher run admissions on the privileged path.

Who	Normal day's work in the app	Must not do
Finance	Fees, record payments, finance reports; MFA required.	Ask a homeroom to tick "paid" to save a queue.
Student Affairs / safeguarding	Health, counselling, safeguarding cases — restricted collections.	Paste case notes into WhatsApp or Maya Assistant.
HR / procurement / store / transport head	Staff accounts, stock, buses and assignments — only those modules.	Use a colleague's login because "their role has the button".
Parent	Linked child: attendance, homework, published materials, selected fees/notices.	Ask staff for another family's child "just to check".
Student	Own timetable, homework, own published grades.	Share the password with classmates to copy homework.
Driver	See passengers on **their bus**; publish GPS/scans for that bus.	Log in as another driver to see the whole school's children.
Platform owner (MaJo)	Create/suspend a school tenant; PIN console.	Put the service-role key or PIN in chat; use a teacher JWT to provision schools.

3. Files, logos, and Maya Assistant

- **Do:** put student photos and documents in the school file area (private). Put only the **logo / stamp** in branding (that is what the login page can show without a password).
- **Do not:** upload a class photo, ID scan, or report card as the "logo".
- Maya Assistant (optional): it sees **counts** (how many students), not names. Do not type a child's name, medical note, or password into the prompt. If the school forbids external AI, MaJo leaves the AI key unset — the rest of the ERP still works.

4. Passwords, shared computers, and leaving

- Each person has their own username. A staff-room PC is common; **sign out** when you leave the desk. A stolen teacher session lasts until the login expires — teachers are not forced onto MFA.
- Do not write passwords on the classroom board or in a staff WhatsApp group.
- When someone leaves the school, Admin/HR disables that account the same day. Do not wait for "end of term".
- MaJo support: send **counts and function names**, never a spreadsheet of children, never the service-role key.

5. Misuse scenarios and user-related risks

INSA asked this guide so reviewers can see how people actually fail, not only how the database is coded. The product blocks many of these; some remain people risks.

ID	Misuse / user risk	What the system does	What the school/MaJo must still do
UR-01	Teacher tries to open another school's data	JWT school_id + RLS deny. CAAT two-school tests in source.	Do not share School IDs/passwords across campuses.
UR-02	Teacher tries payroll, HR, or whole-school children's files	Write/read gates deny ordinary teachers. 403 must not dump the school.	Do not create a "see all" staff role for convenience.
UR-03	Homeroom marks a fee paid	Paid-status is a finance function.	Finance keeps MFA; do not share the finance login with homeroom.
UR-04	Driver wants every student "in case they board the wrong bus"	Driver sees only `transportId` = own `busId`.	Assign the child on the Transport desk; do not give the driver an admin login.
UR-05	Parent asks for a neighbour's child	Parent JWT is linked-child only.	Staff must refuse verbal overrides; change links only on the registrar desk.
UR-06	Shared staff PC, teacher walks away still signed in	Session stays valid. Teacher MFA is optional (classroom availability).	Sign out; screen lock; do not leave report cards on screen.
UR-07	Password on WhatsApp / board	Rate-limit slows guessing; does not stop a shared secret.	Reset that account; never paste passwords in group chat.
UR-08	Student photo uploaded as login logo	Branding bucket is public by design (login has no JWT).	This is a data spill. Remove the object; follow CSMS-IRP-001; tell the CSO.
UR-09	Safeguarding notes pasted into Maya Assistant or a ticket	Assistant is instructed to refuse health/safeguarding/IDs; tickets must not contain student rows.	Use the safeguarding module only; MaJo support gets counts, not names.
UR-10	Admin grants Full Access to themselves as a teacher	Owner-only template; teacher cannot grant full_access to self.	School owner reviews role titles in Role Settings.
UR-11	Leaver still has a live login	No automatic HR feed from every school's payroll.	Disable the account the day they leave (HR/Admin).
UR-12	Export of a class list to a personal Gmail / USB	The app cannot stop a screenshot or copy from a screen the user is allowed to see.	Acceptable-use: no children's files on personal mail. School admin acknowledges at go-live (CSMS-HR-001).
UR-13	Platform PIN or service-role in a screenshot to "fix login"	Client binaries must not contain the service-role key.	MaJo staff: CSMS-HR-001. Rotate the key if it leaked (P1).
UR-14	Using mayabela.pages.dev for a school whose TOR forbids shared foreign hosting	Product supports a dedicated/on-prem instance.	Do not onboard that school on the shared URL (CSMS-SUP-001).

6. What to do when something looks wrong

1. Do not delete evidence. Sign out if you think someone else used your desk.
2. Tell the school admin. If children's data may have left the school (public logo, WhatsApp class list, leaked password), they tell MaJo: +251 911 646 444 / nabilmaya6464@gmail.com.
3. MaJo CSO follows CSMS-IRP-001 (contain, preserve, Ethio-CER2T if confirmed). Prefer disabling one account over taking the whole school offline.

7. Related documents

MB-SRS-001 (roles and required controls). MB-SDD-001 (where data travels). CSMS-HR-001 (acceptable use). CSMS-IRP-001 (incidents). CSMS-DPIA-001 (Maya Assistant).
