MAJO BRIDGE TECHNOLOGIES AND EVENTS PLC

MaJo e-School Bridge (MayaBela) · asset MB-ESB-001 · version 1.0.6

Files testers may need (accounts, keys, environment, supporting documents)

Tester access pack

What INSA / Hibir testers need to exercise the product — without live school keys or children's files

Document number	MB-TEST-001
Version	1.0 · 10 November 2026 · East Africa Time (Africa/Nairobi)
Portal field	Upload any files testers may need — test accounts, API keys, credentials, environment configs, or other supporting documents.
Classification	CONFIDENTIAL — tester briefing. This PDF contains **no** production passwords, PIN, or service-role key.

Do not upload, and testers will not be given: the production service-role key; the platform-owner PIN; any live school's Admin/Finance password; spreadsheets of real students; health or safeguarding notes. Those are CSMS-HR-001 violations and would put children at risk.

1. Environment (what to open)

Item	Value
Product URL	**https://mayabela.pages.dev** (hard-refresh Ctrl+Shift+R if the UI looks old)
Asset	MaJo e-School Bridge (MayaBela) · Web Application · MB-ESB-001 · 1.0.6
Login fields	School ID + username (phone or email or student username) + password + role
Publishable (anon) API key	Already compiled into the web app. Testers do **not** need a separate API key for browser tests. RLS is the boundary (CSMS-KEY-001).
Service-role / PIN	Not issued. Not in the client. Not in this pack.
Dedicated / on-prem schools	Out of scope for this shared URL. Do not mix those tenants onto mayabela.pages.dev.

2. Test tenant and accounts

Testers work on a **synthetic school** provisioned for the engagement (no real children's names). MaJo CSO creates it on the platform console and issues time-limited passwords by a channel other than a public ticket (phone / in-person / encrypted mail to the named tester).

Ask for accounts covering these desks. Passwords are **not printed here**; CSO fills the right-hand column when issuing:

Role to test	What it should be able to do	Must not do	Credential
School Admin	Users, classes, branding, role titles. MFA enroll in Settings.	Share this login with homeroom.	Issued out of band

Role to test	What it should be able to do	Must not do	Credential
Teacher	Attendance, homework, marks for assigned class. MFA optional.	Payroll, HR, whole-school register, mark fee paid.	Issued out of band
Finance	Fees / record payments. MFA required like Admin.	Give this login to a teacher.	Issued out of band
Registrar	Admissions, student registry, parent links.	Let a teacher use the privileged admissions path.	Issued out of band
Parent	Linked synthetic child only.	Neighbour's child.	Issued out of band
Student	Own timetable / homework / published grades.	Another student's login.	Issued out of band
Driver	Passengers and GPS for **their bus** only.	Every child in the school.	Issued out of band

Contact to issue accounts: **+251 911 646 444** · nabilmaya6464@gmail.com · name the tester and the engagement dates. Accounts are disabled when the test window ends.

Local-only sandbox logins in source (`demo.student` / School ID `TB-001`) are **not** cloud accounts. They will not open https://mayabela.pages.dev. Do not try them against production.

3. Rules of engagement

- **Do:** test tenant isolation (School A vs School B), teacher vs finance vs driver, login rate-limit, public branding vs private files, MFA prompt on Admin/Finance.
- **Do:** use the synthetic school only. Eight failed logins in 15 minutes lock that username+role+school (not the whole site).
- **Do not:** load-test or brute-force the live URL during school hours (09:00–18:00 East Africa Time) in a way that could stop attendance.
- **Do not:** upload a class photo as the login logo; that bucket is public.
- **Do not:** paste real student rows, medical notes, or passwords into Maya Assistant or into Hibir tickets.
- Prefer disabling one test account over taking the school offline. Report findings to the CSO (CSMS-IRP-001).

4. Supporting documents already on this asset

Upload these on the same Hibir asset if not already attached. Testers should read them before the first login.

File	Use for testers
MB-SRS-001	Roles and required controls
MB-SDD-001	Where data travels; attack surfaces AS-01–AS-12
MB-TDD-001	JWT / RLS / Edge catalogue; CAAT suites 10/11/12
MB-UG-001	How desks are used; misuse UR-01–UR-14
MB-SEC-001	Posture and controls; Guideline PASS Mature 86/100

Source-level CAAT (no live SQL): replay migrations into local Postgres — `supabase/tests/local_pg/tests/10_insa_permission_hardening.sql`, `11_insa_driver_need_to_know.sql`, `12_insa_two_school_isolation.sql`. Production project is refused as an RLS isolation target.

5. What this pack is not

- Not a dump of API keys. The anon key is in the published app; the service-role key stays with MaJo.
- Not permission to test a paying school’s live tenant.
- Not a pentest report (that letter is produced after the test).

Prepared by (CSO)	For INSA / Hibir asset registration
